

What's New

Buzzsaw 2007.4 SP includes improved control over permission assignments for project administrators and general performance improvements.

Project Administrator Permission Control: When project administrators have been granted the ability to create users, they can create new site users who are initially active in the project where they were created. By default the new user is granted view rights to the project, but it has been found that this allows project administrators to grant these view rights unintentionally. To help prevent this accidental granting of view rights to the new user, a new dialog has been created.

This dialog will be presented to the project administrator if they have not accessed the permission tab when creating this new user.

Notable Defects Fixed 2007.4 SP (October 2007)

ID	DESCRIPTION
BZ-16	Repaired error "MISSING Discipline FOR CULTURE: en-US in Autodesk.Buzzsaw.Server.Applications.DRResources.resources" seen in the Document Register on some sites.
