

Extension 2 Service Pack 1 Release Notes

This service pack contains a fix for the following defect.

We strongly recommend upgrading to this service pack to avoid any issues that may be caused by this defect.

Key	Summary
SMOK-11917	If a project contains any linked media that has become unlinked (for example, the source clip was stored on a removable drive that was disconnected) and then project proxies are turned on, the proxy generation job may fail and all clips in the project may become unlinked. This bug does not occur if proxies were turned on when the project was originally created.
