

MEIS | Softimage

Autodesk®

Welcome to the *Media | Entertainment Industry Standards (MEIS) for Autodesk® Softimage®*. Autodesk provides this document to help instructors and educational institutions develop the necessary skills to teach Softimage and prepare their learners for the challenges of working in industry. This document is the result of extensive interviews with professionals, educators, and managers at prestigious production companies around the world. The *Media | Entertainment Industry Standards (MEIS)* ultimately provide the education and entertainment communities with clear benchmarks and definitions for instructing with Softimage.

**TIP:** Although this document is designed to help facilitate the development of instructor-led courses and lessons, it may also be referenced for self-paced learning by instructors. The Standards encourage self-learning through the use of the Softimage documentation and online help.

This introduction covers the following topics:

- Document Goals
- Document Objectives
- Prerequisites
- Using this Document
- Notes, Tips, Warnings, and Thoughts
- Feedback

### Document Goals

The *Media | Entertainment Industry Standards (MEIS)* have the following goals:

- Ensure learners receive comprehensive instruction of Softimage, with a focus on its role and function in the computer graphics entertainment industry.
- Standardize the requirements and/or core competencies for fundamental and intermediate level instruction with Softimage.
- Provide a clear benchmark on the type and level of content that should be taught to new learners of Softimage.
- Provide a content framework for developing high-quality curriculum, courseware, and lessons involving Autodesk Softimage.
- Provide a content framework and reference guide for the Autodesk® Certified Instructor (ACI) program.

### Document Objectives

- After reviewing this document, you will be able to:
- Explain the purpose of the Media | Entertainment Industry Standards (MEIS).
- Identify the structure and features of the Media | Entertainment Industry Standards (MEIS).
- Distinguish and organize instructional content typically associated with Softimage into four primary areas.
- Explain how to develop instructor-led lessons by referencing the Media | Entertainment Industry Standards (MEIS), indicating features in the document that will enable the collection of additional information around a particular subject.

## Prerequisites

The *Media | Entertainment Industry Standards (MEIS)* are designed for instructors who desire fast and efficient access to the essential principles of computer graphics theory, practice, and software technology typically associated with learning Softimage.

It is recommended that you have:

- A comprehensive understanding of computer graphics theory and practice.
- A good understanding of adult learning principles and instructional methodologies.
- A robust working knowledge of Autodesk® Softimage®.

## Using This Document

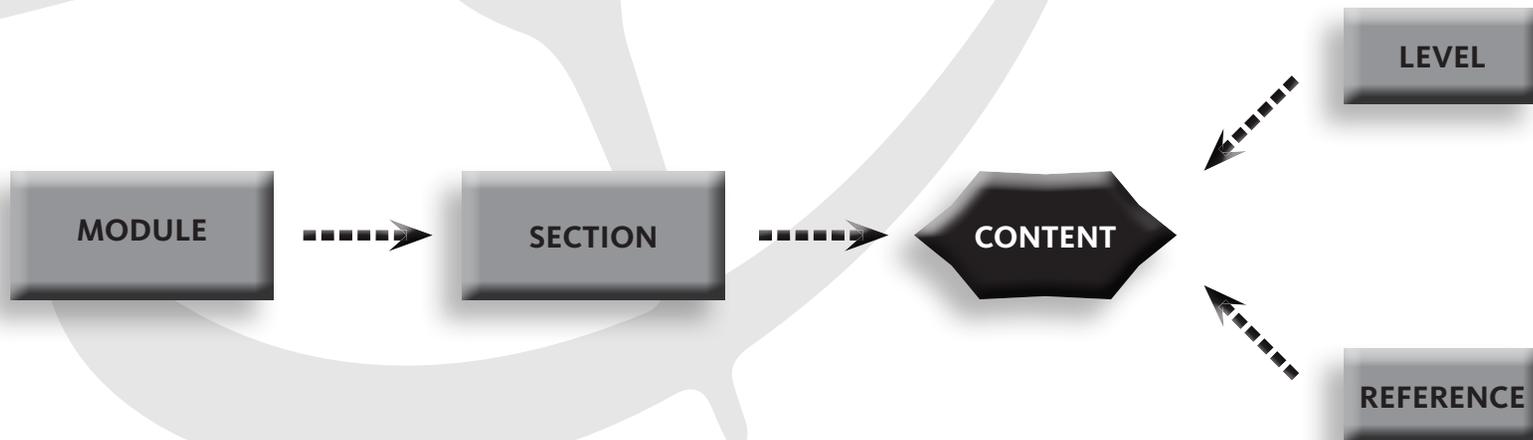

This section will provide an overview of the *Media | Entertainment Industry Standards (MEIS)*.

**THOUGHT:** The Autodesk® Certified Instructor (ACI) program includes online and live courses designed to help instructors learn how to best utilize the *Media | Entertainment Industry Standards (MEIS)*. For information on the program, visit: <http://www.autodesk.com/aci>. Using instructional tools like the *Media | Entertainment Industry Standards (MEIS)*, instructors will be able to develop the most compelling learning content and provide the most effective instruction.

The *Media | Entertainment Industry Standards (MEIS)* employs a hierarchical structure. This design is intended to provide organization and clarity around content (i.e. information) that can be perceived as highly complex or confusing to the computer graphics community. It is also meant to ensure instructors have the means to reference the document and get the information they need in the most efficient and productive manner.

The structure of the *Media | Entertainment Industry Standards (MEIS)* includes a 3-tier hierarchy

*THOUGHT:* The structure of the *Media | Entertainment Industry Standards (MEIS)* is identical for *Autodesk® 3ds Max®*, *Autodesk® Maya®*, and *Autodesk® Softimage®*. Much of the content inside is similar or identical as well. This is strategically designed to promote cross-learning quickly and efficiently so instructors may increase their technical skills and abilities with Autodesk software.

## MODULES

The *Media | Entertainment Industry Standards (MEIS)* is divided into 13 MODULES. Each MODULE relates to a standard, functional subject area or feature-set available in Autodesk® Softimage®. Several of the MODULES can be loosely associated to a standardized discipline or career path available in the computer graphics entertainment industry.

The MODULES are listed below in alphabetical order:

1. Animation
2. Cameras
3. Compositing
4. Dynamics / Simulation
5. Effects
6. Lighting
7. Materials / Shading
8. Modeling
9. Rendering
10. Rigging / Setup
11. Scene Assembly / Pipeline Integration
12. Scripting
13. UI / Scene Management

Each MODULE in the *Media | Entertainment Industry Standards (MEIS)* is divided into 4 SECTIONS:

1. Theory. This SECTION provides content that is conceptual or theoretical in nature. Historical/background information on a MODULE is also identified in this SECTION.
2. Applied. This SECTION provides content that is practical in nature (i.e. how the information or the software technology is typically applied in industry. Workflow and techniques that utilize the software technology are identified in this SECTION.
3. Activity. This SECTION provides recommended activities/exercises that instructors can offer to their learners. Adults typically learn the most knowledge and retain the most skills by 'doing things', so this SECTION is perhaps the most important asset for the instructor.

*THOUGHT:* It is up to the creativity of the instructor to create and provide the most stimulating and engaging ACTIVITIES. If you would like to share your ACTIVITY recommendations with Autodesk, please send correspondence to: [me.certification@autodesk.com](mailto:me.certification@autodesk.com). Your contributions are welcomed and may be listed in future releases of this document!

1. Tools. This section provides content relating directly to the features, toolsets, options, and commands available in Autodesk® Softimage®.

**WARNING:** The content in the Media | Entertainment Industry Standards (MEIS) is not listed in chronological order! Any instances of this are coincidental and should be evaluated by the individual.

## SECTIONS

Each SECTION in the *Media | Entertainment Industry Standards (MEIS)* contains many rows of content. Each row of content has designations for LEVELS and connections to REFERENCES. The following section will explain the concept of LEVELS and REFERENCES.

## LEVELS

All content in the *Media | Entertainment Industry Standards (MEIS)* has a LEVEL designation. The two LEVEL designations are Fundamental and Intermediate. Advanced LEVEL content is out of the scope of the documents.

**NOTE:** Teaching at a particular LEVEL does not establish the instructor's comprehension or skills with Softimage. An instructor's interest in teaching at the fundamental LEVEL courses does not typically mean their knowledge is limited to a fundamental LEVEL. In fact, most instructors teaching at the fundamental level are accomplished Softimage users.

The concept of the LEVEL designation is important for two reasons. First, the LEVEL attempts to highlight the amount of difficulty that most beginner computer graphics learners may have when attempting to absorb a particular piece of information. In this manner, it should be assumed that Fundamental LEVEL content should be taught before Intermediate LEVEL content. Second, the LEVEL attempts to distinguish content that is Fundamental LEVEL or Intermediate LEVEL from content that could be considered Advanced LEVEL. In this manner, it should be assumed that Advanced LEVEL content would directly follow Intermediate LEVEL content.

The most important point to remember when considering the LEVEL of any piece of information is how it could be perceived to the learner. Instructors need to remember that most subjects in the computer graphics field include information that could easily be perceived as Advanced LEVEL to learners that were not previously exposed to Fundamental or Intermediate LEVEL content around the same subject.

**WARNING:** In practice, LEVEL of content is highly subjective to the individual instructor and learner. The content one instructor identifies as Fundamental LEVEL may be Intermediate LEVEL content to another. Similarly, the LEVEL of difficulty learners have with any particular subject can be directly associated to their experience, knowledge, skills, and interests around the subject. Instructors must recognize this and act accordingly!

## REFERENCES

The *Media | Entertainment Industry Standards (MEIS)* contain two different kinds of REFERENCES.

1. (External Content) REFERENCES. This type of REFERENCE identifies content around the subject that is readily available through the internet. These REFERENCES are indicated in the Theory, Applied, and Activity SECTIONS of the *Media | Entertainment Industry Standards (MEIS)*. Instructors should evaluate the appropriateness of the content available through this REFERENCE when designing instructor-led courses and lessons.

**TIP:** Every effort has been made to ensure each link is associated with live content. If you experience difficulty using the links, please use the text in the link to search for this content on the internet. The internet contains a wealth of information on each subject listed in the content section of this document.

**WARNING:** The REFERENCES provided in the *Media | Entertainment Industry Standards (MEIS)* are not a complete collection of links around a subject. If you identify a better link, please use it! If you would like to share it, please send correspondence to: [me.certification@autodesk.com](mailto:me.certification@autodesk.com). Your contributions are welcomed and may be listed in future releases of this document!

2. (Software Documentation and Online Help) REFERENCES. This type of REFERENCE indicates the string of text that can be entered into the search field of the software documentation and online help system in order to receive more information around a subject. These REFERENCES are indicated in the Tools SECTION of the *Media | Entertainment Industry Standards (MEIS)*. Instructors should evaluate the appropriateness of the content available through this REFERENCE when designing instructor-led courses and lessons.

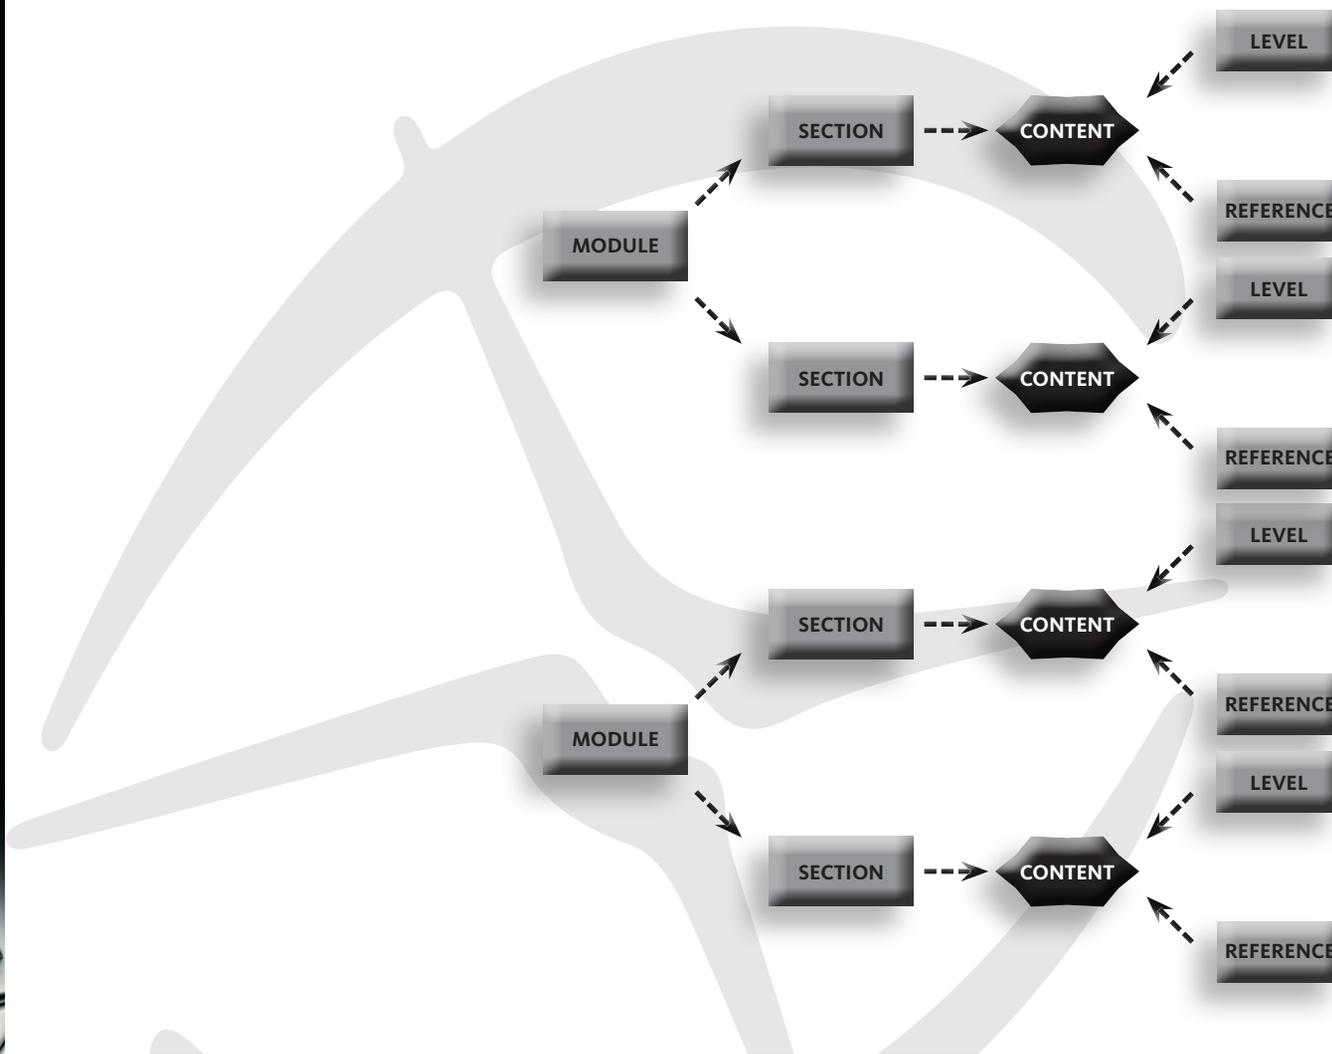

**NOTE:** This document is complementary to the software documentation and online help. For detailed explanations of specific software features and functionality, refer to the documentation and online help system in the software. You may also reference the software documentation and online help that is available on Autodesk.com.

# INTRODUCTION

The following graphic provides a more detailed illustration of the structure of the *Media | Entertainment Industry Standards (MEIS)*:

**NOTE:** The amount of content listed in each **MODULE** may vary according to several factors, including the relevance of the content, the variety of content available in the respective **SECTION**, and the difficulty that learners (at a particular **LEVEL**) may have in learning the content. For example, one **MODULE** may be extensive at the Fundamental **LEVEL**, while another **MODULE** may be more technically challenging and is therefore more limited at the Fundamental **LEVEL**. Similarly, one **MODULE** may be heavy in Theory, while another **MODULE** is sparse.

### Notes, Tips, Warnings, and Thoughts

Throughout this document, notes, tips, warnings, and thoughts are called out for special attention. Notes contain guidelines, constraints, and other explanatory information. Tips provide information to enhance your productivity. Warnings provide information about actions that might result in confusion experienced by yourself or your learners. Thoughts contain additional information that you may want to reflect upon or take further action.

### Feedback

Autodesk welcomes feedback on the *Media | Entertainment Industry Standards (MEIS)*. After reviewing this document, if you have suggestions for improvements, or if you want to report an error, please send your feedback to: [me.certification@autodesk.com](mailto:me.certification@autodesk.com).

Topic	Sub-Topic	Recommendation	Reference	Level
Animation 101	Animation Paradigms	Use visual examples to introduce and compare various animation techniques available in the software (i.e. Keyframe, Motion Path, Expression, Simulation, Motion Capture, etc.), discussing their common applications and benefits.		Fundamental
Motion Dynamics	Frame Rate (FPS)	Introduce the concept of Frame Rate and Frames Per Second (FPS), reviewing the standard rates used in various market segments (i.e. Film, Games, etc.)	<a href="#">Frame Rate</a>	Fundamental
	Persistence of Vision	Introduce the concept of Persistence of Vision, identifying its relationship to object motion.	<a href="#">Persistence of Vision</a>	Fundamental
Animation Techniques	Keyframing	Introduce the concept of the Keyframe, providing historical reference.	<a href="#">Keyframe</a>	Fundamental
	Keyframing	Discuss the process of setting key frames for an object and review the use of coordinate systems to specify position in 3D space. Illustrate the Keyframing process using basic visuals (i.e. create and analyze a simplified timeline) and/or props.	<a href="#">Keyframe</a>	Fundamental
	Inbetweening	Introduce the concept of inbetweening (i.e. creating intermediate images or frames between key frames in order to create the full motion of characters and objects), providing historical reference.	<a href="#">Inbetweening</a>	Fundamental
	Interpolation	Review the principle methods of interpolation between key frames (e.g. linear, constant, stepped, spline, etc...). Introduce the concept of the function-curve and function-curve editor, discussing how the motion of objects can be changed precisely using a variety of controls in the software.	<a href="#">Interpolation</a>	Fundamental
Newton's Laws of Motion	Inertia	Introduce Newton's first law (Inertia) and its relationship to object motion. Explain and illustrate that objects will remain at rest or continue in uniform motion and in a straight line unless a force acts upon them.	<a href="#">Inertia</a>	Fundamental
	Acceleration	Introduce Acceleration and its relationship to object motion. Explain and illustrate the statement: "An object will accelerate depending on the amount and direction of the force used to move it."	<a href="#">Acceleration</a>	Fundamental

Topic	Sub-Topic	Recommendation	Reference	Level
Newton's Laws of Motion	Force	Introduce Force and its relationship to object motion. Explain and illustrate the statement: "If you use twice the force an object will move twice as far."	<a href="#">Force</a>	Fundamental
	Mass	Introduce Mass and its relationship to object motion. Explain and illustrate the statement: "If you double the weight of an object it will move half the distance when struck with the same force."	<a href="#">Mass</a>	Fundamental
	Action and Reaction	Introduce Newton's Third Law of Motion. Explain and illustrate the statement: "For every action there is an equal and opposite reaction."	<a href="#">Action and Reaction</a>	Fundamental
Motion Dynamics	Friction	Introduce the concept of friction and its effect on the motion and trajectory of objects in 3D space.	<a href="#">Friction</a>	Fundamental
Animation Techniques	Breakdowns	Review the process of breaking down the action of a short motion sequence in order to identify the critical poses that distinguish the important stages or features of the motion.	<a href="#">Walk</a>	Intermediate
Animation Principles	12 Basic Principles of Animation	Introduce the 12 Basic Principles of Animation, listing the principles and briefly discussing it's historical significance to the art of animation.	<a href="#">12 Basic Principles of Animation</a>	Intermediate
	Straight Ahead and Pose to Pose	Illustrate and compare the differences in method and workflow between straight ahead animation and pose-to-pose animation and describe the advantages, disadvantages and combination of both techniques.	<a href="#">Straight Ahead and Pose to Pose</a>	Intermediate
	Slow In and Slow Out	Explain and illustrate how objects and characters (and character actions) accelerate when they start moving and decelerate when they come to a stop.	<a href="#">Slow In and Slow Out</a>	Intermediate
	Anticipation	Explain and demonstrate how anticipation captures and directs the viewer's attention, leads the viewer into the main action, gives cues about what to expect and guides the motivation of an object or character.	<a href="#">Anticipation</a>	Intermediate
	Follow Through	Explain and demonstrate that as a result of the force created by the main action, characters and connected objects continue to move after the principle motion ends.	<a href="#">Follow Through</a>	Intermediate
	Arcs	Explain and show how humans, animals, and organic life forms (and in some cases objects – e.g. a golf ball in flight) do not move in absolutely straight lines but through paths of action that are curved in space.	<a href="#">Arcs</a>	Intermediate

Topic	Sub-Topic	Recommendation	Reference	Level
Animation Principles	Overlapping Action	Explore how the motion of objects connected to a character (or another object) will overlap the main action as a result of the transfer of forces along the chain of connections to the furthest point.	<a href="#">Overlapping Action</a>	Intermediate
	Secondary Action	Use visual examples to explain and illustrate how secondary actions create richer and more detailed natural movements, enhance the emotion and motivation of a character, embellish character traits and create a distinct personality.	<a href="#">Secondary Action</a>	Intermediate
	Exaggeration	Explain and illustrate how disproportionate movement or amplified actions (breaking the rules of physics) can be used to intensify and accentuate the viewer's experience and draw attention to specific actions and emotions.	<a href="#">Exaggeration</a>	Intermediate
	Squash and Stretch	Review and explore the process of deforming the shape of an object or character (while keeping its volume and apparent mass constant) to improve the expressive qualities of its motion.	<a href="#">Squash and Stretch</a>	Intermediate
	Timing	Explain and illustrate how expressive timing decisions give meaning to movement by creating anticipation and surprise, by revealing the action, pacing a shot and conveying the mass, force and dynamics of motion in objects and characters.	<a href="#">Timing</a>	Intermediate
	Staging	Explain and illustrate how the process of organizing and arranging the elements of a scene in 2D or 3D space (visual storytelling) is used to create specific actions, moods, character behaviors and interactions and to create visual clarity in a shot or scene.	<a href="#">Staging</a>	Intermediate
	Solid Drawing	Review the importance of good solid drawing or modeling to clearly illustrate the anatomy, volume, weight, balance and form of characters, show how good silhouettes are key to character performance, and why twinning should be avoided.	<a href="#">Solid Drawing</a>	Intermediate
	Appeal / Charisma	Illustrate how a character's design should clearly and immediately communicate to the audience its personal and cultural background as well as its psychological characteristics and personality.	<a href="#">Appeal</a>	Intermediate
Animation Techniques	Euler vs. Quaternion	Introduce the two different methods of rotation and explain the pros/cons of each system	<a href="#">Euler vs. Quaternion</a>	Intermediate

Topic	Sub-Topic	Recommendation	Reference	Level
Motion Dynamics	Frame Rate (FPS)	Demonstrate how to set frame rates for a variety of market standards in the Autodesk software application.	<a href="#">Frame Rate</a>	Fundamental
	Persistence of Vision	Demonstrate the visual characteristics of an animated motion sequence viewed at various frames rates and explain the difference between shooting on 24, 12 and 8 frames per second.	<a href="#">Persistence of Vision</a>	Fundamental
Animation Techniques	Keyframing	Review the coordinate system(s) used to specify position in 3D space, demonstrate setting key frames for a simple object (i.e. Box, Cube) moving in 3D space, show how key frames may be duplicated, cut and pasted on a time lime, and demonstrate how objects can be moved, rotated and scaled.	<a href="#">Keyframe</a>	Fundamental
	Keyframing	Focus initial keyframing demonstrations on the ability to control object Position/Translation first, object Rotation second, and object Scale last. Also focus demonstrations on the transformations of real-world objects undergoing accurate, objective motions that learners can easily relate to. (i.e. a wooden crate that drops and rolls across the ground, the hands of a clock that rotate from a center point).		Fundamental
	Inbetweening	Demonstrate animation UI workflow with a simple activity (i.e. keyframing the movement of a single primitive object along 1 axis), focusing on how intermediate frames (inbetweens) are used to create motion between key frames.	<a href="#">Inbetweening</a>	Fundamental
	Interpolation	Demonstrate the application of key frame interpolation and the use of and function-curve editor to visualize and manipulate the motion of an object between key frames.	<a href="#">Interpolation</a>	Fundamental

**WARNING:** This document contains several instances where URL's of the same or similar name may link to different website addresses

Topic	Sub-Topic	Recommendation	Reference	Level
Animation Techniques	Keyframing	Demonstrate digital animation basics by controlling simple object motion (i.e. non-deforming bouncing ball) along multiple axis		Fundamental
		Demonstrate digital animation basics by controlling the movement, rotation, and scale of a simple object (i.e. non-deforming box) interacting with other objects in a scene		Fundamental
	(Motion) Paths	Introduce (Motion) Path animation, providing historical and practical reference		Fundamental
		Showcase popular examples of (Motion) Path animation from contemporary media.		Fundamental
	Hierarchical Animation	Demonstrate the ability to control basic transformational motion through the use of simple parent/child and/or group-based object hierarchies (i.e. automobile>axle>wheel>tire, reciprocating fan>rotor>blades)		Fundamental
Newton's Laws of Motion	Inertia, Force, Mass, Acceleration	Demonstrate digital animation basics and Newton's Laws of Motion by controlling the motion of several simple (non-deforming) objects that transform and interact with each other in a simple environment (i.e. Pin Ball Machine, Billiards Table, or Rube Goldberg System). For example, a billiard ball moves and falls into a corner pocket when struck by a cue ball; Triggered by the impact of a cue stick striking the cue ball.	<a href="#">Rube Goldberg Machines</a>	Fundamental
	Action and Reaction	Demonstrate Newton's Third Law of Motion by animating a ball interacting with a box to show how the two interact depending on the mass of the ball and the force with which it hits the box. Be sure to define the physical and visual properties of each object for added realism and objective critique of the motion.	<a href="#">Action and Reaction</a>	Fundamental

Topic	Sub-Topic	Recommendation	Reference	Level
Motion Dynamics	Friction	Use visuals to illustrate various forms of friction that result from surface contact, mechanical friction, fluid friction, air resistance, and turbulence.	<a href="#">Friction</a>	Fundamental
Animation Principles	Straight Ahead and Pose to Pose	Demonstrate both straight-ahead and pose-to-pose animation methods using examples from 2D, 3D and stop motion animation.	<a href="#">Straight Ahead and Pose to Pose</a>	Intermediate
	Slow In and Slow Out	Demonstrate and analyze slow-in and slow-out movements for a variety of light and heavy objects as well as fast and slow character actions.	<a href="#">Slow In and Slow Out</a>	Intermediate
	Anticipation	Illustrate anticipation using simple examples such as bending down before a jump, backward arm motion before throwing a ball, a downward bounce before a dive or shifting feet before lifting a weight.	<a href="#">Anticipation</a>	Intermediate
	Follow Through	Demonstrate and show with visual examples that when an action stops, slows down, or changes direction, the parts of the object furthest away from the centre will tend to continue to move in the direction of the original force.	<a href="#">Follow Through</a>	Intermediate
	Arcs	Demonstrate how the path of action of each part of the body moves in an arc as a result of the physical limitations of the body's joints. Illustrate this through analyzing the arc that result from all kinds of movement such as hip motion, throwing or kicking a ball, a martial arts move, or a punch.	<a href="#">Arcs</a>	Intermediate
	Overlapping Action	Demonstrate and illustrate overlapping action using examples that involve connection between objects and joints characterized by the successive breaking of joints.	<a href="#">Overlapping Action</a>	Intermediate
	Secondary Action	Demonstrate how a range of secondary actions can complement, enhance and support a character's primary action and personality through actions such as hand and head gestures, changes of expression, nervous movements, blinking, yawning, waving or shaking a fist.	<a href="#">Secondary Action</a>	Intermediate

Topic	Sub-Topic	Recommendation	Reference	Level
Animation Principles	Exaggeration	Demonstrate and explain how exaggeration helps the viewer better understand the behavior of an object, an event or the emotion of a character by enhancing (disproportionately increasing or decreasing) one or more animation principles.	<a href="#">Exaggeration</a>	Intermediate
	Squash and Stretch	Demonstrate the use of squash and stretch techniques on a variety of characters and objects for both realistic effects and stylized or highly distorted. Show how changes in body shape, movements and facial expressions add lifelike attributes to characters.	<a href="#">Squash and Stretch</a>	Intermediate
	Timing	Demonstrate how proper timing (together with spacing) is used to convey weight, force, scale, and the dynamics of motion through anticipation, slow in and slow-out, follow-through, reaction, arcs, overlapping action and secondary actions	<a href="#">Timing</a>	Intermediate
	Staging	Demonstrate how effective staging and posing of characters in a shot can be used for maximum impact and to show how working out how characters in a scene will move assists the audience in clearly understanding the action.	<a href="#">Staging</a>	Intermediate
	Solid Drawing	Demonstrate the importance of solid modeling in character design, illustrating with visual examples of how strong silhouettes are important to a character's physical and emotional state and why twinning should be avoided.	<a href="#">Solid Drawing</a>	Intermediate
	Appeal / Charisma	Select and analyze the design of a variety of animated characters and objects and explain how their design conveys the essential elements of their character and personality.	<a href="#">Appeal</a>	Intermediate
	Graph/Curve Editor VS. Dope Sheet	Compare the Dope Sheet to the Graph/Curve Editor (i.e. Using Dope Sheet to adjust timing and Graph/Curve Editor for general animation purposes)		Intermediate

Topic	Sub-Topic	Recommendation	Reference	Level
Animation Techniques	Ghosting/Unghosting objects	Demonstrate the ability to ghost an object as a tool for analyzing animation - timing, slow in/out, arcs		Intermediate
	Animating with Constraints	Demonstrate the use and benefits of animating with constraints (in context to real-world examples)		Intermediate
	Breakdowns	Demonstrate the process of breaking down a sample motion in order to identify the key frames and additional distinct poses (breakdowns) that characterize the movement.	<a href="#">Walk</a>	Intermediate
Animation Performance	Critiquing Animation Performance	Demonstrate how to research and assemble examples of animation (i.e. traditional and digital) from contemporary media. Showcase the results, identifying the intent of the performance and evaluating any perceptible strengths or deficiencies in the motion.	<a href="#">Artistic Critique</a>	Intermediate

Topic	Sub-Topic	Recommendation	Reference	Level	
Motion Dynamics	Frame Rate (FPS)	Practice setting various frame rates, playback a given animation sequence at different frame rates and evaluate the results in terms of any perceptible visual differences.	<a href="#">Frame Rate</a>	Fundamental	
	Persistence of Vision	Animate and compare the motion of an object moving horizontally across the screen when shot on 1's 2's and 3's.	<a href="#">Persistence of Vision</a>	Fundamental	
Animation Techniques	Keyframing	In 3D space, animate a simple object (i.e. Box, Cube) moved between two key frames, then moved and rotated to a third key frame and further moved and scaled between the third and a fourth key frame.	<a href="#">Keyframe</a>	Fundamental	
	Keyframing	Keyframe animate a series of real-world objects undergoing accurate, objective motions. (i.e. a wooden crate that drops and rolls across the ground, the hands of a clock that rotate from a center point). Practice the ability to control object Position/Translation first, object Rotation second, and object Scale last.		Fundamental	
	Inbetweening	Practice animation UI workflow with a simple activity (i.e. keyframing the movement of a single primitive object along 1 axis)	<a href="#">Inbetweening</a>	Fundamental	
	Interpolation	Use a function-curve editor to create and manipulate the motion between key frames of a forward bouncing ball. Change the interpolation methods to create different dynamic motions.	<a href="#">Interpolation</a>	Fundamental	
	Keyframing	Practice digital animation basics by controlling simple object motion (i.e. non-deforming bouncing ball) along multiple axis			Fundamental
		Practice digital animation basics by controlling the movement, rotation, and scale of a simple object (i.e. non-deforming box) interacting with other objects in a scene			Fundamental
	(Motion) Paths	Practice creating and controlling the motion of simple, mechanical objects (automobiles on a banked racetrack, airplanes in an aerial chase, etc. using Motion Path animation.			Fundamental

**WARNING:** This document contains several instances where URL's of the same or similar name may link to different website addresses

Topic	Sub-Topic	Recommendation	Reference	Level
Newton's Laws of Motion	Inertia, Force, Mass, Acceleration	Practice digital animation basics and illustrate Newton's Laws of Motion by creating and controlling the motion of several simple (non-deforming) objects that transform and interact with each other in a simple environment (i.e. Pin Ball Machine, Billiards Table, or Rube Goldberg System). For example, a billiard ball moves and falls into a corner pocket when struck by a cue ball; Triggered by the impact of a cue stick striking the cue ball.	<a href="#">Newton's First Law - Example</a>	Fundamental
	Action and Reaction	Create an animation that illustrates how a ball and a box will move as a result of varying the apparent mass and weights of both objects. Define the physical and visual properties of each object for added realism and objective critique of the motion by your peers.	<a href="#">Action and Reaction</a>	Fundamental
Motion Dynamics	Friction	Animate an object that is affected by friction. Define the physical and visual appearance of the object and type of friction it encounters for added realism and objective critique of the motion by your peers. For example, the motion of a golf ball in flight is influenced by both gravity and air turbulence (wind force and direction).	<a href="#">Friction</a>	Fundamental

Topic	Sub-Topic	Recommendation	Reference	Level
Animation Techniques	Breakdowns	Using video reference, break down and draw or trace (rotoscope) the four key poses of a typical walk cycle (contact, up, down and passing).	<a href="#">Walk</a>	Intermediate
Animation Principles	Straight Ahead and Pose to Pose	Animate a bouncing ball using straight ahead animation and compare it with a version using pose-to-pose.	<a href="#">Straight Ahead and Pose to Pose</a>	Intermediate
		Animate a simple bipedal character walk cycle using straight ahead animation and a second example using pose-to-pose animation with four key poses (contact, up, down and passing).		Intermediate
	Slow In and Slow Out	Create slow-in and slow-out movements to show realistic motion for a simple action such as the motion of a swinging pendulum.	<a href="#">Slow In and Slow Out</a>	Intermediate
	Anticipation	Using photographs or sketches, observe, record, and illustrate anticipation in a sports action, waiting for a bus, preparing to catch a ball, or a cat pouncing on a mouse.	<a href="#">Anticipation</a>	Intermediate
		Create anticipation in a simple action such as a character preparing to jump over a box.		Intermediate
	Follow Through	Using photographs or sketches, illustrate follow-through of several actions such as the motion of a club after hitting a golf ball, the wings of a large bird in flight, the flow of a dress as a female character stops walking, or a robot's loose parts falling off after it hits the ground or recovery after a jump.	<a href="#">Follow Through</a>	Intermediate
	Arcs	Select a complex human movement such as hitting a golf ball, a dive into water, a hurdler, or the path of action of a soccer ball kicked into the air, and illustrate in a sketch the primary arcs of motion.	<a href="#">Arcs</a>	Intermediate
	Overlapping Action	Animate the overlapping motions of the shoulder, elbow, wrist, hand and fingers when throwing a ball using successive breaking of joints.	<a href="#">Overlapping Action</a>	Intermediate
Secondary Action	Create secondary actions for a character standing and waiting for a bus or a walking robot with loosely attached features.	<a href="#">Secondary Action</a>	Intermediate	

Topic	Sub-Topic	Recommendation	Reference	Level
Animation Principles	Exaggeration	Research and present visual examples of how exaggeration can be achieved by amplifying or reducing either the size, shape, timing spacing, weight, forces, arc of action, pose, follow-through, slow in and out or staging of actions and characters.	<a href="#">Exaggeration</a>	Intermediate
	Squash and Stretch	Apply squash and stretch to the motion of a forward bouncing ball.	<a href="#">Squash and Stretch</a>	Intermediate
	Timing	Vary the timing and spacing of a bouncing ball to convey different weights and (e.g. table tennis ball and bowling ball). Vary the timing of slow-in and slow-out motions to convey varying forces on a billiard ball.	<a href="#">Timing</a>	Intermediate
		Experiment with the timing of shots in a scene to best convey the action and engage the viewer's interest.		Intermediate
	Staging	Stage the positions and interaction of two characters in conversation illustrating the conservation of the 180-degree rule.	<a href="#">180 Degree Rule</a>	Intermediate
	Solid Drawing	Create a dramatic silhouette for a given character that clearly illustrates its intended motion or emotional state such as excitement, depression frustration or a sports action.	<a href="#">Solid Drawing</a>	Intermediate
Appeal / Charisma	Research, select, analyze and compare 2D, 3D and stop motion character designs that best convey clear, immediate and distinct aspects of a character's history, personality and psychology.	<a href="#">Appeal</a>	Intermediate	
Animation Techniques	Hierarchical Animation	Practice the ability to control basic transformational motion through the use of simple parent/child and/or group-based object hierarchies (i.e. automobile>axle>wheel>tire, reciprocating fan>rotor>blades)		Intermediate
	Animating with Constraints	Practice animating objects with constraints (in context to real-world examples).		Intermediate
Animation Performance	Critiquing Animation Performance	Research and assemble examples of animation (i.e. traditional and digital) from contemporary media. Present your findings to your peers, evaluating any perceptible strengths or deficiencies in the motion.	<a href="#">Artistic Critique</a>	Intermediate

Topic	Sub-Topic	Recommendation	Reference	Level
Keyframing Basics	Animation Terminology	Introduce the concept of Keyframe, Breakdown, and Inbetween	<i>Animating with Keys</i>	Fundamental
Animation UI	Animation Layout Configuration	Demonstrate efficient UI layout for keyframe animation	<i>Overview of Layouts</i>	Fundamental
	TimeLine	Overview of Timeline	<i>Timeline</i>	Fundamental
	Range Slider	Setting Start and End range for playback	<i>Time Range</i>	Fundamental
	Playback Controls	Play, step, loop, RT buttons	<i>Playback controls</i>	Fundamental
	Keyframe button	Using the Key/Unkey button	<i>Overview of Setting Keys</i>	Fundamental
	Keyframe Icon feedback colors	Explain colors cues for keyed, onkey, offkey, changed	<i>Animation Icon</i>	Fundamental
	Animation Menu	Overview of the tools in the Animation Menu	<i>Tools for Animation</i>	Fundamental
	UI switcher buttons	Switching between the MCP and KP/L	<i>The Autodesk Softimage Interface</i>	Fundamental
	Ghosting and Trails	Show how to set up a ghosting per object, and the ghost options including trail	<i>Ghosting Animated Objects</i>	Fundamental
	Displaying Animation Stats	Display Frame Rate and Cache	<i>Camera Visibility Property Editor / stats</i>	Fundamental
Creating Animation: Keyframing	Animation Preferences	Animation settings in the Preferences Window for Time Slider and Playback	<i>Animation Preferences</i>	Fundamental
	Set Key	Setting keys with keyframe icon(s) and hotkeys	<i>Overview of Setting Keys</i>	Fundamental
	Auto Key	using autokey	<i>Setting Keys Automatically</i>	Fundamental
	Marking Params	Marking parameters for keys from either selected transform or using menu	<i>Marking Parameters for Animation</i>	Fundamental
	local vs. global parameters	Explain the difference on local and global params	<i>Animating Local versus Global Transformations</i>	Fundamental
	Using Key Panel (KP)	Overview of the KP/L (Key Panel)	<i>Keying Keyable Parameters in the Keying Panel</i>	Fundamental
	Using Property Windows	How to use property windows, virtual sliders, keyframe icons and the Keyframe Property editor (Ctrl K)	<i>Modifying Properties in Property Editors</i>	Fundamental

Topic	Sub-Topic	Recommendation	Reference	Level
Editing Animation: Keyframing	Unkey	How to remove a single keyframe per object/selected parameters	<i>Overview of Setting Keys</i>	Fundamental
	Select Keys	Selecting keys in timeline		Fundamental
	Move keys in time	Moving selected keys in timeline	<i>Editing Keys in the Timeline</i>	Fundamental
	Delete Keys	Deleting keys in timeline		Fundamental
	Scale keys in time	Scaling selected keys in timeline		Fundamental
	Copy Keys	copying selected key in timeline		Fundamental
	Paste Keys	pasting keys in timeline	Fundamental	
	Scrub without update to key	Middle mouse scrubbing	<i>Playing the Animation</i>	Fundamental
Editing Animation: Animation Editor (Fcurve)	Animation Editor	Overview of Curve editor UI and menus	<i>Overview of the Fcurve Editor</i>	Fundamental
	Select keys	Selecting keys		Fundamental
	Moving Keys in time and value	Moving keys, and constraining to time or value, also snapping options		Fundamental
	Deleting keys	Deleting keys from a Fcurve		Fundamental
	Inserting Keys	Inserting keys on a Fcurve		Fundamental
	Tangent Types	Linear, Spline, Plateau, Clamped...		Fundamental
	Adjusting Tangents	Editing Tangent handles angle, length and breaking tangents		Fundamental
	Cycles, Gradient and Relative Cycle	Creating cycles, and Freezing cycles	<i>Creating Function Curve Cycles</i>	Fundamental
	Snapping Keys to whole frames	Snapping Keys to whole frames	<i>Snapping Key Points</i>	Fundamental
Dope Sheets	Dope Sheet Overview	What is dope sheet used for, how is it different from timeline	<i>Dopesheet</i>	Fundamental
	Selecting Keys	Selecting keys		Fundamental
	Activating and Deactivating keys	How to turn off certain parameters		Fundamental
	Moving keys	Moving keys		Fundamental
	Scaling keys	Scaling keys		Fundamental
	Copying Keys	Copying Keys		Fundamental
	Pasting Keys	Pasting Keys		Fundamental
	Deleting Keys	Deleting Keys		Fundamental

Topic	Sub-Topic	Recommendation	Reference	Level
Preview/Render Animation	Capture	Creating a camera capture to a movie file	<i>Capturing Animation in a Viewport (Flipbook)</i>	Fundamental
	Fast Playback and Caching	Setting display options for Animation playback	<i>Playing Back All Frames or Playing in Real Time</i>	Fundamental
Creating Animation: Motion Paths	Attach to Path	Attaching an object to a path	<i>Animating along Paths and Trajectories</i>	Fundamental
	Turning on Tangent and UpVector	Controlling tangent follow		Fundamental
	Editing Path animation in Curve editor	Controlling roll		Fundamental
Hotkeys	k = set key	using “k” hotkey	<i>Keyboard Shortcuts</i>	Fundamental
	Alt + k = set keys on all	using “Alt + K” hotkey		Fundamental
	Ctrl + k = keyframe parameters	using “ Ctrl + k” hotkey		Fundamental
Constraints	Animating with Constraints	Introduce the process and benefits of animating with simple Constraints (Point, etc...)	<i>Animating with Constraints</i>	Fundamental
Procedural Animation	Procedural Animation	Show the use of basic expressions and linking parameters	<i>Animation Overview</i>	Intermediate
	Basic Expressions	Simple expression like “rotation z = trans x / (size * pi)” to create an automatic roll	<i>Animating with Expressions</i>	Intermediate
	Link Params	Setting relationship between objects, like a door than opens when an object gets close	<i>Linking Parameters</i>	Intermediate
Deformers	Shape	Shape animation with Shape Manager	<i>Shape Animation</i>	Intermediate
	Cluster	Animating clusters to control curves points or surface areas	<i>Cluster Animation</i>	Intermediate
Audio	Importing Sound files	Importing Sound files	<i>Creating Audio Clips</i>	Intermediate
	Audio scrubbing options	Audio scrubbing options	<i>Playing Audio Clips</i>	Intermediate
Hierarchy Animation	Creating and Parenting Nulls as Animation helpers	Example parent a null to a box, then animate null in X axis, then animation ball jumping up and down to create bumpy ride animation	<i>Parent-Child Relationships Between Objects (Hierarchies)</i>	Intermediate

Topic	Sub-Topic	Recommendation	Reference	Level
Animating Pivots	Using the temporary pivot for Animation	Using ALT hotkey to edit pivot	<i>Transformation Basics</i>	Intermediate
	Animating actual pivot	Pivot Animation and compensate	<i>Pivot Animation</i>	Intermediate
Editing Animation: Animation Mixer	Non Linear Animation (NLA)	Provide an overview of the benefits and process of NLA	<i>What is NonLinear Animation</i>	Intermediate
	Adding Actions with the Biped Rig (pose and Fcurve)	Adding actions using Animation mixers or dragging from Browser to Mixer or rig	<i>The Animation Mixer</i>	Intermediate
	Creating new tracks	creating animation, shape or audio tracks	<i>Working with Tracks</i>	Intermediate
	Mute, Solo and ghosting tracks	Overview of the Mixer track display options	<i>The Animation Mixer</i>	Intermediate
	Moving actions	Moving an action in time or to a different track		Intermediate
	Scaling and cropping	Adjusting the length of an actions		Intermediate
	Looping actions	Creating and editing actions cycles		Intermediate
	Blending between actions using weight and layers	show simple weight based blending		Intermediate
	Creating offsets	pose offset and offset maps		Intermediate
	Editing Clip Properties	adjusting properties per clip		Intermediate
	Editing Source Properties	adjusting source properties, deactivating parameters		Intermediate
	Creating Pose Actions	Creating a current frame action (poses)		Intermediate
	Creating Animation Actions	Creating a Fcurve action (motion)		Intermediate
	Blending using standard blend	Blending between clips (poses and motion)		Intermediate
	Using compounds to group actions	Combining actions to a compound		Intermediate
Using warp curve	Time warping actions and compounds	Intermediate

Topic	Sub-Topic	Recommendation	Reference	Level
Cinematography	Aspect Ratio	Introduce and illustrate five common aspect ratios of film and television formats (4:3, 3:2, 16:9, 1.85:1 and 2.39:1)	<a href="#">Aspect Ratio</a>	Fundamental
	Composition	Illustrate the principles of organization for screen design with emphasis on division of space and placement of elements.	<a href="#">Composition</a>	Fundamental
	Depth of Field	Define the term depth of field and differentiate between deep focus (both foreground and background in focus) and shallow depth of field.	<a href="#">Depth of Field</a>	Fundamental
	Camera Angles	Introduce the different cinematic Shot Types (ex. Establishing/ Wide Shot, Close-Up, Extreme Close-Up)	<a href="#">Cinematic Techniques</a>	Fundamental
	Camera Position	Describe shots that result from specific camera positions such as Point of View (POV), bird's eye or crane, low angle, over the shoulder, reverse shot, and zoom together explanation of the with the 180 degree rule.	<a href="#">Camera Position</a>	Fundamental
	Staging	Introduce the importance of staging the position and movement (blocking) of characters and objects in a scene in order to direct the viewer's attention and direct the action.	<a href="#">Staging</a>	Fundamental
	Camera Movement	Differentiate Still Photography from Cinematography. Describe the primary camera movements used in film and television production including pan, tilt, dolly (tracking) and zoom.	<a href="#">Camera Movement</a>	Fundamental

Topic	Sub-Topic	Recommendation	Reference	Level
Cinematography	Aspect Ratio	Using a selection of images from each format compare and discuss the advantages and limitations of each in terms of scene composition.	<a href="#">Aspect Ratio</a>	Fundamental
	Composition	Introduce the Rule of Thirds and symmetrical/asymmetrical balance as methods of composition and the organization of scene elements.	<a href="#">Rule of Thirds</a>	Fundamental
	Depth of Field	Illustrate narrow depth of field and deep focus using images from photography, cinematography and computer graphics.	<a href="#">Depth of Field</a>	Fundamental
	Camera Angles	Demonstrate how different Shot Types can influence the meaning/impact of an Image/Story; Illustrate using examples from contemporary media.	<a href="#">Cinematic Techniques</a>	Fundamental
	Camera Position	Demonstrate the application of different camera positions using practical examples from film or television.	<a href="#">Camera Position</a>	Fundamental
	Staging	Illustrate good staging by selecting shots or stills from CG animated films where the staging clearly illustrates the relationship or action between two characters. Compare this to poor staging where the action is not clear.	<a href="#">Staging</a>	Fundamental
	Camera Movement	Demonstrate how camera movement can be used to stage the action, direct the viewers attention, or emphasize the meaning/impact of an sequence/story; Present visual examples from contemporary media.	<a href="#">Camera Movement</a>	Fundamental

**WARNING:** This document contains several instances where URL's of the same or similar name may link to different website addresses

Topic	Sub-Topic	Recommendation	Reference	Level
Cinematography	Aspect Ratio	Crop a given scene using the five formats above to analyze the advantages, limitations and uses of different aspect ratios.	<a href="#">Aspect Ratio</a>	Fundamental
	Composition	Provide a scene with a basic, pre-defined set of primitive objects (ex. Cube or Sphere). Using only basic transformation methods (move, rotate, duplicate, etc...), ask the learners to create a composition of their choice. Afterwards, conduct a group critique to evaluate the compositions created by each learner.	<a href="#">Composition</a>	Fundamental
	Composition	Select two aspect ratios and create compositions (drawings or by photography) of an outdoor scene containing a building and two characters using the rule of thirds.	<a href="#">Rule of Thirds</a>	Fundamental
	Depth of Field	Use selective focus to isolate a single object from a series of objects placed at different distances from the camera's position. Use smaller apertures to increase the depth of field.	<a href="#">Depth of Field</a>	Fundamental
	Camera Angles	Provide a scene with a pre-built environment that includes many pre-arranged props and several cameras. Ensure that each camera is named according to a specific Shot Type (ex. Wide/Establishing Shot, Close-Up, Extreme Close-Up, etc...). Ask the learners to brainstorm and visualize a simple storyboard that utilizes different Shot Types to introduce the environment to an audience. Next, ask the learners to place each camera in correspondence with its visual story-telling function in their scene. Afterwards, conduct a group critique to evaluate the creativity and effectiveness of the cinematic choices made by each learner.	<a href="#">Cinematic Techniques</a>	Fundamental
	Camera Position	Create several images of a simple scene with two characters using a variety of camera positions to vary the viewer's experience.	<a href="#">Camera Position</a>	Fundamental
	Staging	Stage two characters to illustrate a self-evident relationship between them such as confrontation, a sports activity, a greeting, a marriage proposal, or a sad parting.	<a href="#">Staging</a>	Fundamental
	Camera Movement	Separate your learners into small teams. Provide a scene (for each team) that includes several pre-built models (ex. cars moving on a road, characters sitting at a table) and a series of cameras that are positioned to capture each of the models. Provide a simple story to introduce the scene and ask each team to visually stage the scene through a series of shots based on the story. Ask each team to animate one of the following: 1) The cameras moving around stationary models. 2) The models moving around stationary cameras. 3) The cameras moving around moving models. Ensure each option is animated by at least one team. Afterwards, conduct a group critique to compare and evaluate the cinematic impact of each team's work based on the story.	<a href="#">Camera Movement</a>	Fundamental

Topic	Sub-Topic	Recommendation	Reference	Level
Graphic Design Principles	Elements of Design	Review the basic elements of design including line, shape, color, form, value, texture, size, and composition plus one, two and three-point perspective.	<a href="#">Design Elements</a>	Fundamental
	Principles of Design (Organization)	Review the basic principles of design organization with emphasis on composition, rule of thirds (geometry), center of interest, balance, contrast, directional movement, negative and positive space, rhythm, light, shade, and juxtaposition of elements.	<a href="#">Composition</a>	Fundamental
	Color Theory	Review the foundations of color theory including additive color theory, contrast of hue, saturation, value; warm, cold and complementary colors and the relationship between the color temperature of various light sources and color balance in film and video.	<a href="#">Color Theory</a>	Fundamental
Motion Graphics Principles	Cameras and Lenses	Review the relationship between focal length, aperture and depth of field emphasizing their practical application to the isolation and importance of specific areas or characters in a scene and the effect of changing focal length on perspective.	<a href="#">Focal Length</a>	Fundamental
	Film and Video Formats	Review the concepts of aspect ratio, safe title, and safe action in accordance with major film and television formats.	<a href="#">Film Formats</a>	Fundamental
	Digital Matting	Introduce the process and benefits of digital matting, providing historical reference.	<a href="#">Digital Matting</a>	Intermediate
	Motion Blur	Describe and explain the cause and visual characteristics of motion blur in still images, motion pictures and HD video. Explain why motion may be needed to add realism during the compositing process.	<a href="#">Motion Blur</a>	Intermediate
	Rotoscoping	Introduce the process and benefits of rotoscoping, providing historical reference.	<a href="#">Rotoscoping</a>	Intermediate

Topic	Sub-Topic	Recommendation	Reference	Level
Graphic Design Principles	Elements of Design	Use examples from a variety of graphic designs and film stills that illustrate the use of design elements to isolate and emphasize objects and their organization in one, two and three point perspective.	<a href="#">Design Elements</a>	Fundamental
	Principles of Design (Organization)	Use stills from film and video to illustrate the principles of spatial organization and their use in directing the viewer's eye in the composition.	<a href="#">Composition</a>	Fundamental
	Color Theory	Review a variety of still from film and video that illustrate the use of a variety of color selection and arrangements that support the action, complement the location, indicate time of day, influence the mood and enhance the viewer's experience of a shot or scene.	<a href="#">Color Theory</a>	Fundamental
Motion Graphics Principles	Cameras and Lenses	Using shots and scenes from film and video, demonstrate control of depth of field under different emotional circumstances to isolate or emphasize the action and direction the viewer's eye to the key action. Also show how maximum depth of field can be used to set the stage for action on a grand scale such as battles and dramatic scenes and as a key technique in blending scene elements.	<a href="#">Depth of Field</a>	Fundamental
	Film and Video Formats	Use illustrations to review the aspect ratios of major film and television formats and stress the critical importance of safe title and safe action areas.	<a href="#">Safe Area</a>	Fundamental
	Digital Matting	Demonstrate the process of digital matting in a simple composition.	<a href="#">Digital Matting</a>	Intermediate
	Motion Blur	Demonstrate a variety of motion blur phenomena in contemporary media using illustrative examples from still photography, film shots, game cinematics, and video sequences.	<a href="#">Motion Blur</a>	Intermediate
	Rotoscoping	Demonstrate the process of rotoscoping in a simple composition.	<a href="#">Rotoscoping</a>	Intermediate

**WARNING:** This document contains several instances where URL's of the same or similar name may link to different website addresses

Topic	Sub-Topic	Recommendation	Reference	Level
Graphic Design Principles	Elements of Design	Given a variety of design elements, arrange them so that the relationship among them is clear to the viewer (key objects are emphasized) and so that there is consistent light direction and shading.	<a href="#">Design Elements</a>	Fundamental
	Principles of Design (Organization)	Given a variety of aspect ratios for film and television formats, arrange a group of design elements (e.g. characters, props, and buildings) to create a strong composition and clear indication of the action in a shot.	<a href="#">Composition</a>	Fundamental
	Color Theory	Using a black and white illustration of a scene with a description of specific time of day and atmosphere or mood, create an appropriate color pallet that supports and enhances the shot.	<a href="#">Color Temperature</a>	Fundamental
		Use a digital camera to record different scenes lit by a variety of light sources and at different times of day (with and without color balance correction) to evaluate the resulting changes in color balance and its correction.	<a href="#">Color Balance</a>	Fundamental
Motion Graphics Principles	Cameras and Lenses	Create a group of images using a digital still camera that demonstrate control of depth of field, its use to isolate objects in a scene, and the effects of changes in perspective on characters, objects and buildings photographed from different distances.		Fundamental
	Film and Video Formats	Research and create reference illustrations of the aspect ratios, safe title and safe actions areas on three major TV formats (NTSC, PAL and HD) and two major film formats (35mm and 70mm).	<a href="#">Film Formats</a>	Fundamental
	Digital Matting	Use digital matting techniques in the Autodesk software to create a simple multi-layer composition of pre-rendered image elements.	<a href="#">Digital Matting</a>	Intermediate
	Motion Blur	Create a variety of motion blur examples by experimenting with digital still images of moving objects (using long shutter speeds) and by variations of camera movement in different lighting conditions using film or video.	<a href="#">Motion Blur</a>	Intermediate
	Rotoscoping	Use rotoscoping techniques in the Autodesk software to alter and/or remove a specific image element (such as an object) in an animation sequence over time.	<a href="#">Rotoscoping</a>	Intermediate

Topic	Sub-Topic	Recommendation	Reference	Level
Analytical Dynamics	States of Matter	Review the three principle states of matter (solid, liquid and gas) and the phenomenon of phase transition that can occur among them as they change state.	<a href="#">State of Matter</a>	Fundamental
	Newton's Laws of Motion	Review Newton's three Laws of Motion	<a href="#">Newton's Laws of Motion</a>	Fundamental
	Physical Properties	Review the physical properties (composition, mass, size, shape, physical distribution, texture, friction, elasticity, viscosity, tension, liquid density and compression) of a range of common soft and rigid objects around you.	<a href="#">Physical Properties</a>	Fundamental
	Physical Forces	Review the physical forces that affect the size, position, shape and motion (behavior) of objects including mass, gravity, heat, friction, wind, vortex, turbulence (fluid dynamics – laminar and turbulent flow), potential and kinetic energy.	<a href="#">Force</a>	Fundamental
Naturally Occurring Phenomena	Rock Slides	Using reference imagery, review the forces, physical motion, and evolution of a rock slide.	<a href="#">Rock Slides</a>	Intermediate
	Earthquakes	Using reference imagery, review the forces, physical motion, and evolution of an earthquake.	<a href="#">Earthquakes</a>	Intermediate
	River Flow	Using reference imagery, review the forces, physical motion, and evolution of a river flow.	<a href="#">River Flows</a>	Intermediate
	Waterfalls	Using reference imagery, review the forces, physical motion, and evolution of a waterfall.	<a href="#">Waterfalls</a>	Intermediate
	Avalanches	Using reference imagery, review the forces, physical motion, and evolution of an avalanche.	<a href="#">Avalanches</a>	Intermediate
	Ocean Waves	Using reference imagery, review the forces, physical motion, and evolution of an ocean wave.	<a href="#">Ocean Waves</a>	Intermediate

Topic	Sub-Topic	Recommendation	Reference	Level
Analytical Dynamics	States of Matter	Demonstrate the relationship among the primary states of matter (solid, liquid and gas) and explain the concept of phase transition between them.	<a href="#">State of Matter</a>	Fundamental
	Newton's Laws of Motion	Demonstrate Newton's three laws of motion (Law of Inertia: Mass, Force, and Acceleration: Equal and Opposite Reaction) using the example of balls of different mass interacting with boxes of varying weight.	<a href="#">Newton's Laws of Motion</a>	Fundamental
	Physical Properties	Demonstrate the physical properties of a wide range of rigid and solid objects such as metal, wood, plastic, paint, flesh, hair, fur, oil, feathers, fabrics (clothing), water, ice, balloons, glass, paper, clay, springs, egg shells, etc...	<a href="#">Physical Properties</a>	Fundamental
	Physical Forces	Demonstrate the effect a range of forces on a wide range of soft and rigid objects when being struck by another soft or rigid object, subjected to forces (gravity, turbulence, friction, wind etc.) or ignited, heated, compressed, or bent, etc...	<a href="#">Force</a>	Fundamental
Naturally Occurring Phenomena	Rock Slides	Demonstrate the forces, physical motion, dynamics, and evolution of a rock slide.	<a href="#">Rock Slides</a>	Intermediate
	Earthquakes	Demonstrate the forces, physical motion, dynamics, and evolution of an earthquake.	<a href="#">Earthquakes</a>	Intermediate
	River Flow	Demonstrate the forces, physical motion, dynamics, and evolution of a river flow.	<a href="#">River Flows</a>	Intermediate
	Waterfalls	Demonstrate the forces, physical motion, dynamics, and evolution of a waterfall.	<a href="#">Waterfalls</a>	Intermediate
	Avalanches	Demonstrate the forces, physical motion, dynamics, and evolution of an avalanche.	<a href="#">Avalanches</a>	Intermediate
	Ocean Waves	Demonstrate the forces, physical motion, dynamics, and evolution of an ocean wave.	<a href="#">Ocean Waves</a>	Intermediate
Dynamics Optimization	Surface Interpenetration	Introduce the concept of interpenetration and demonstrate how to identify and resolve it.		Intermediate
	Stand-in Objects	Demonstrate how to use low resolution objects to solve a simulation quicker.		Intermediate

Topic	Sub-Topic	Recommendation	Reference	Level
Analytical Dynamics	States of Matter	Review the three principle states of matter (solid, liquid and gas) and the phenomenon of phase transition that can occur among them as they change state.	<a href="#">State of Matter</a>	Fundamental
	Newton's Laws of Motion	Review Newton's three Laws of Motion	<a href="#">Newton's Laws of Motion</a>	Fundamental
	Physical Properties	Review the physical characteristics (composition, mass, size, shape, physical distribution) of common physical phenomenon.	<a href="#">Physical Properties</a>	Fundamental
	Physical Forces	Review the physical forces that affect the size, position, shape and motion (behavior) of objects including mass, gravity, heat, friction, wind, vortex, turbulence (fluid dynamics – laminar and turbulent flow), potential and kinetic energy.	<a href="#">Force</a>	Fundamental
Naturally Occurring Phenomena	Fire	Using reference imagery, review the physical and dynamic properties of fire.	<a href="#">Fire</a>	Intermediate
	Lightning	Using reference imagery, review the physical and dynamic properties of lightning.	<a href="#">Lightning</a>	Intermediate
	Tornado	Using reference imagery, review the physical and dynamic properties of tornadoes.	<a href="#">Tornado</a>	Intermediate
	Explosion	Using reference imagery, review the physical and dynamic properties of explosions.	<a href="#">Explosion</a>	Intermediate
	Dust Storm	Using reference imagery, review the physical and dynamic properties of dust storms.	<a href="#">Dust Storms</a>	Intermediate
	Rain	Using reference imagery, review the physical and dynamic properties of rain.	<a href="#">Rain</a>	Intermediate

Topic	Sub-Topic	Recommendation	Reference	Level
Analytical Dynamics	States of Matter	Demonstrate the relationship among the primary states of matter (solid, liquid and gas) and explain the concept of phase transition between them.	<a href="#">State of Matter</a>	Fundamental
	Newton's Laws of Motion	Demonstrate Newton's three laws of motion (Law of Inertia: Mass, Force, and Acceleration: Equal and Opposite Reaction) using the example of dust particles (i.e. dust storm) pushing and scattering small objects (i.e. rocks, etc.) around a desert floor.	<a href="#">Newton's Laws of Motion</a>	Fundamental
	Physical Properties	Illustrate the physical properties of water in the form of a cloud, fog, light rain, heavy rain (hurricane), snow and hail.	<a href="#">Physical Properties</a>	Fundamental
	Physical Forces	Illustrate using video examples, the typical forces that cause a phenomenon such as an avalanche to form, change and dissipate.	<a href="#">Force</a>	Fundamental
Naturally Occurring Phenomena	Fire	Demonstrate the forces, physical motion, dynamics and evolution of fire.	<a href="#">Fire</a>	Intermediate
	Lightning	Demonstrate the forces, physical motion, dynamics and evolution of lightning.	<a href="#">Lightning</a>	Intermediate
	Tornado	Demonstrate the forces, physical motion, dynamics and evolution of a tornado.	<a href="#">Tornado</a>	Intermediate
	Explosion	Demonstrate the forces, physical motion, dynamics and evolution of an explosion.	<a href="#">Explosion</a>	Intermediate
	Dust Storm	Demonstrate the forces, physical motion, dynamics and evolution of a dust storm.	<a href="#">Dust Storms</a>	Intermediate
	Rain	Demonstrate the forces, physical motion, dynamics and evolution of rain.	<a href="#">Rain</a>	Intermediate

Topic	Sub-Topic	Recommendation	Reference	Level
Introduction to Materials	CG Shading 101	Provide an introduction to the shading process, identifying concepts such as the reflection of light, flat versus smooth shading, etc.	<a href="#">Shading</a>	Fundamental
Surface / Light Interaction	Illumination	Discuss the theory behind the Angle of Incidence and the Angle of Reflection.	<a href="#">Angle of Reflection</a>	Fundamental
Primary Material Properties	Color	Discuss the material property of color, focusing on standard CG color models such as HSV. Breakdown the HSV color model, describing the importance of each component (e.g. Hue = Color (i.e. rainbow), Saturation = intensity of the color, Value = lightness/darkness of the color).	<a href="#">Color</a>	Fundamental
	Specularity	Use visual examples to explain and illustrate the concept of specularity. Indicate the importance of specularity in providing a strong visual cue for the shape of an object and its location with respect to light sources in the scene	<a href="#">Specularity</a>	Fundamental
	Reflection	Use visual examples to explain and illustrate the concept of reflectivity, focusing on Specular Reflection versus Diffuse Reflection.	<a href="#">Specular Reflection</a>	Fundamental
	Refraction	Describe refraction (using visual examples) and compare to reflection.	<a href="#">Refraction</a>	Fundamental
	Transparency	Use visual examples to explain and illustrate the concepts of transparency and translucency.	<a href="#">Transparency</a>	Fundamental
Surface Characteristics	Texture / Surface Relief	Review the effect of texture on the appearance of an object with emphasis on it's physicality and surface relief.	<a href="#">Texture (Visual Arts)</a>	Fundamental
	Texture Mapping	Use visual examples to explain and illustrate the concept of texture mapping, focusing on basic considerations such as resolution and standard mapping options.	<a href="#">Texture Mapping</a>	Fundamental
	Bump Mapping	Use visual examples to explain and illustrate the concept of bump mapping, focusing on basic considerations such as height/depth and image optimization.	<a href="#">Bump Mapping</a>	Fundamental
	Displacement Mapping	Use visual examples to explain and illustrate the concept of displacement mapping, focusing on basic considerations such as image resolution, image quality, and image optimization.	<a href="#">Displacement Mapping</a>	Intermediate
	Normal Mapping	Use visual examples to explain and illustrate the concept of normal mapping. Provide an overview on the standard technical process to generate and apply normal maps to objects.	<a href="#">Normal Mapping</a>	Intermediate
Surface / Light Interaction	Light Reflection / Dispersion	Use visual examples to explain and illustrate how different surface characteristics influence light reflection and light dispersion.		Intermediate

Topic	Sub-Topic	Recommendation	Reference	Level
Introduction to Materials	CG Shading 101	Demonstrate the typical processing of applying shading to CG objects using Autodesk software.	<a href="#">Shading</a>	Fundamental
Surface / Light Interaction	Illumination	Demonstrate the concept of Angel of Incidence and Angle of Reflection using diagrams, simple film shots, or simply by reflecting a laser beam (i.e. laser pointer) off a mirrored surface in the room.	<a href="#">Angle of Reflection</a>	Fundamental
Primary Material Properties	Color	Demonstrate how to research online imagery that depicts a strong and/or creative use of color in a composition. Using the examples, analyze the use of color to provide visual interest and/or visual direction in the composition.	<a href="#">Color</a>	Fundamental
	Specularity	Demonstrate how to research online imagery that depicts a strong and/or creative use of specularity in a composition. Using the examples, analyze the use of specularity to provide visual interest and/or visual direction in the composition.	<a href="#">Specularity</a>	Fundamental
	Reflection	Demonstrate how to research online imagery that depicts a strong and/or creative use of reflection in a composition. Using the examples, analyze the use of reflection to provide visual interest and/or visual direction in the composition.	<a href="#">Specular Reflection</a>	Fundamental
	Refraction	Demonstrate how to research online imagery that depicts a strong and/or creative use of refraction in a composition. Using the examples, analyze the use of refraction to provide visual interest and/or visual direction in the composition.	<a href="#">Refraction</a>	Fundamental
	Transparency	Demonstrate how to research online imagery that depicts a strong and/or creative use of transparency in a composition. Using the examples, analyze the use of transparency to provide visual interest and/or visual direction in the composition.	<a href="#">Transparency</a>	Fundamental

**WARNING:** This document contains several instances where URL's of the same or similar name may link to different website addresses

Topic	Sub-Topic	Recommendation	Reference	Level
Surface Characteristics	Texture / Surface Relief	Demonstrate how to research online imagery that depicts a strong and/or creative use of texture in a composition. Using the examples, analyze the use of texture to provide visual interest and/or visual direction in the composition.	<a href="#">Texture (Visual Arts)</a>	Fundamental
	Texture Mapping	Demonstrate the process of applying and aligning an assortment of Texture Maps to an assortment of simple, primitive CG objects (using Autodesk software) for a specific, creative purpose. For example, use Texture Mapping to help change the appearance of a simple primitive Box/Cube into a weathered/worn shipping crate that is made of wood.	<a href="#">Texture Mapping</a>	Fundamental
	Bump Mapping	Demonstrate the process of applying and aligning an assortment of Bump Maps to an assortment of simple, primitive CG objects (using Autodesk software) for a specific, creative purpose. For example, use Bump Mapping to help change the appearance of a simple primitive Cylinder into a weathered/worn soup can that is made of tin/aluminum.	<a href="#">Bump Mapping</a>	Fundamental
	Displacement Mapping	Demonstrate the process of applying and aligning an assortment of Displacement Maps to an assortment of simple, primitive CG objects (using Autodesk software) for a specific, creative purpose. For example, use Displacement Mapping to help change the appearance of a simple primitive Torus into a weathered/worn automobile tire that is made of rubber.	<a href="#">Displacement Mapping</a>	Intermediate
	Normal Mapping	Demonstrate the process of generating and applying a Normal Map to a simple, primitive CG object (using Autodesk software) for a specific, creative purpose. For example, use Normal Mapping to help change the appearance of a simple primitive Plane/Polygon into an environment/terrain.	<a href="#">Normal Mapping</a>	Intermediate
Surface / Light Interaction	Light Reflection / Dispersion	Demonstrate the variation in light reflection and light dispersion that occurs when simple primitive CG objects (e.g. Spheres) with a variety of surface characteristics (ranging from highly reflective to matte) are directly illuminated.		Intermediate

Topic	Sub-Topic	Recommendation	Reference	Level
Animation Principles	Solid Drawing	Review the importance of solid drawing (3D modeling) to produce visually dynamic and interesting objects and characters with a strong sense of proportion balance and weight.	<a href="#">Solid Drawing</a>	Fundamental
	Appeal	Review the importance of strong appeal for a range of objects and characters illustrating the importance of appropriate design and form to emphasize their physical characteristics as well as the charisma, natural temperament and personality.	<a href="#">Charisma</a>	Fundamental
Modeling Paradigms	Polygons	Review the basic terminology and concepts of polygonal modeling and constructive solid geometry.	<a href="#">Constructive Solid Geometry</a>	Fundamental
	NURBS	Review the concept of spline-based modeling and the use of NURBS for generating curves and surfaces that compose freeform and complex organic shapes.	<a href="#">NURBS</a>	Fundamental
	Subdivision Surfaces	Introduce and explain the concept of subdivision surfaces as a technique for creating smooth 3D models based on simple polygonal mesh.	<a href="#">Subdivision Surface</a>	Intermediate
	3D Digital Sculpting	Review the use of 3D digital sculpting software such as Autodesk Mudbox to create complex surface detail and textures.	<a href="#">Mudbox</a>	Intermediate

Topic	Sub-Topic	Recommendation	Reference	Level
Animation Principles	Solid Drawing	Use examples from a variety of 3D objects, characters and creatures, illustrate good and bad proportion, balance and weight.	<a href="#">Solid Drawing</a>	Fundamental
	Appeal	Use examples of animated objects and characters from animated films to illustrate how their design and physical characteristics emphasis and support their intrinsic nature and personality.	<a href="#">Charisma</a>	Fundamental
Polygon Modeling Techniques	Polygon Components	Describe the advantages and disadvantages of Polygonal modeling, illustrating the basics components of the polygonal surface including vertices, edges, faces, etc.	<a href="#">Polygon Components</a>	Fundamental
NURBS Modeling Techniques	NURBS	Introduce and demonstrate the NURBS surface, explain its advantages and disadvantages and the use of control points to affect and control the shape of a complex surface.	<a href="#">NURBS</a>	Fundamental
	Parameterization	Demonstrate the importance of correct parameterization in correct surface construction.	<a href="#">Parameterization</a>	Fundamental
Surface Topology	Non-Manifold Geometry	Explain the importance of avoiding non-manifold geometry, highlighting the effect on rendering, skinning, shading, etc.	<a href="#">Non-Manifold Objects</a>	Fundamental
Subdivision Surface Modeling Techniques	Subdivision Surfaces	Describe and illustrate the application of subdivision surfaces to create objects with different levels of surface complexity (e.g. low to high polygon modeling)	<a href="#">Subdivision Surfaces</a>	Intermediate
Modeling Paradigms	3D Digital Sculpting	Using a range of examples, Illustrate the use of 3D sculpting techniques to create complex organic models, characters and creatures.		Intermediate

**WARNING:** This document contains several instances where URL's of the same or similar name may link to different website addresses

Topic	Sub-Topic	Recommendation	Reference	Level
Animation Principles	Solid Drawing	Select character designs from popular contemporary media and compare how proportion, symmetry, and weight impacts the character's distinct appearance and could impact surface modeling considerations.	<a href="#">Solid Drawing</a>	Fundamental
	Appeal	Select characters from a range of popular contemporary media and review how their appearance reflects, amplifies and exaggerates their personality.	<a href="#">Charisma</a>	Fundamental
Polygon Modeling Techniques	Using polygons	Provide a scene with a polygonal primitive. Demonstrate standard polygon modeling procedures such as moving vertices and edges, extruding and beveling, etc. Create a primitive with enough complexity to allow for experimentation with the various features. Next, create a simple model using these methods, explaining the benefit of starting with a logical primitive, depending on the desired outcome.		Fundamental
	Polygon Sub-Objects/Components	Provide a scene with a pre-built polygonal model, such as a section of terrain with an opening cut out for a lake, and several attached elements, like simple rocks. Use the model to demonstrate the Sub-Object/Component elements available when working with polygons.		Fundamental
NURBS Modeling Techniques	Surface Creation	Demonstrate how to build a glass from a profile curve using the revolve tool. Use several curves to create lofted surfaces, such as several circular shapes to form a rocket, bottle or airplane fuselage. Demonstrate how the shape of the completed surface can be changed by transforming the sub-object elements/components of the surface.		Fundamental
	Parameterization	Create curves using the uniform and chord-length knot spacing methods. Demonstrate rebuilding the curves using either method. Provide a surface created using each method with a texture applied and demonstrate the effects of the different parameterization methods on the fit of the texture by rendering.	<a href="#">Parameterization</a>	Fundamental
Surface Topology	Non-Manifold Geometry	Demonstrate a non-manifold surface using the pages of a book. Hold up one page straight out to demonstrate more than 2 faces (represented by pages) sharing an edge. Create a plane with 2 length and width segments. Select the 3 center vertices in either direction and weld them together to demonstrate a non-manifold surface created by two faces sharing a point but not an edge.	<a href="#">Non-Manifold Objects</a>	Fundamental

**WARNING:** This document contains several instances where URL's of the same or similar name may link to different website addresses

Topic	Sub-Topic	Recommendation	Reference	Level
Subdivision Surface Modeling Techniques	Smoothing	Provide a scene with a simple, low poly object with square edges, such as a hand created by extruding polygons on a box. Demonstrate the results of various smoothing solutions and settings. Enable the display of poly counts so the effect of smoothing the object is both visually and computationally apparent.		Intermediate
	Level of Detail	Using a variety of simple polygonal models, demonstrate the visual effects of several levels of iteration emphasizing the need to use only the level necessary to suit the final image size and detail.		Intermediate
Modeling Paradigms	3D Digital Sculpting	Demonstrate 3D sculpting applied to a single creature through several levels of refinement resulting in a complex and realistic final model.		Intermediate

Selecting Objects	Selections Tools	Overview of Selection tools and modes	<i>Selecting Objects</i>	Fundamental
Editing Objects	Editing Object Properties	Editing the Object Properties	<i>Modifying Properties in Property Editor</i>	Fundamental
Transforming Objects	SRT Tools	Moving Objects and Components with SRT Tools	<i>Transformation Basics</i>	Fundamental
	COG Mode	Using COG Mode to adjust multiple Objects/Components	<i>Transforming Components and Clusters</i>	Fundamental
	“Alt” Pivot	Using the “Alt” to adjust the Transformation Pivot Temporarily	<i>Transformation Basics</i>	Fundamental
Polygon/Subdiv Components	Points	Working with Points	<i>Polygon Meshes</i>	Fundamental
	Edges	Working with Edges		Fundamental
	Polygon Faces	Working with Faces		Fundamental
Nurbs Components	Points	Working with Surface Points	<i>Surface Meshes</i>	Fundamental
	Knots	Working with Surface Knots		Fundamental
	Isolines	Working with Isolines		Fundamental
Selecting Components	Component Selection tools	Selecting Components using selection tools	<i>Selecting Components</i>	Fundamental
	Edge loop selection tools	Selecting Edge Loops “Alt + MMB”		Fundamental
Transforming Components	Using the Tweak Component Tool (M)	Using the Tweak Component Tool, and the Translate, Slide and Weld and RMB options	<i>Using the Tweak Component Tool</i>	Fundamental
	Moving Components with SRT Tools	Using the Scale, Rotate and Translate Tools for components	<i>Transforming Components and Clusters</i>	Fundamental
	Using Symmetry Mode	Using Symmetry Mode		Fundamental
	Using Proportional Modeling	Using Proportional Modeling	<i>Using Proportional Modeling</i>	Fundamental
	Adjusting Proportion Settings	Adjusting Proportional Properties and Adjusting falloff size interactively (R hotkey)		Fundamental
	Transform Settings	Setting Manipulator options, and how multiple components locally	<i>Transform Preferences</i>	Fundamental

Topic	Sub-Topic	Recommendation	Reference	Level
Polygon Modeling	Add and Edit Polygon	Using the Add Polygon tool	<i>Adding and Editing Polygon Mesh Components</i>	Fundamental
	Add Edges	Adding Edges		Fundamental
	Add Vertex	Adding Vertex		Fundamental
	Split Edge / Split Edges (with Split Control)	Splitting Edges (Creating Edge Loops)		Fundamental
	Split Polygon	Splitting Polygons		Fundamental
	Extruding and Copying Polygons Components	Extruding polygons using the Extrude or by duplicating and moving components	<i>Extruding, Duplicating and Insetting Polygon Mesh Components</i>	Fundamental
	Weld Points	Welding points	<i>Adding and Editing Polygon Mesh Components</i>	Fundamental
	Merge	Merging Border edges between 2 objects	<i>Blending and Merging Polygon Meshes</i>	Fundamental
	Bridge Polygons	Using Bridge to create polygons between faces	<i>Bridging Polygons</i>	Fundamental
	Subdivide Polygons	Subdivide Polygons	<i>Adding and Editing Polygon Mesh Components</i>	Fundamental
Boolean	Using Boolean	<i>Performing Boolean Operations on Polygon Meshes</i>	Fundamental	
Polygon Cleanup	Triangulate	Converting Quads to Triangles	<i>Quadrangulating and Triangulating Polygons</i>	Fundamental
	Quadrangulate	Converting Triangles to Quads		Fundamental
Curves	Creating Curves	Creating Curves and Curve Primitives	<i>Drawing and Manipulating Curves</i>	Fundamental
	Curve Based Modeling	Generating Objects from Curves	<i>About Building from Curves</i>	Fundamental
Modeling From Curves	Revolutions Around Axis	Creating objects with Revolution tool	<i>Revolving Curves around Axis</i>	Fundamental
	Extrusion Along Axis	Creating objects using Extrusion Tool	<i>Extruding Curves along Axis</i>	Fundamental
	Loft	Creating objects using Loft	<i>Lofting Curves</i>	Fundamental
Converting Geometry Type	Nurbs to Mesh	Converting a Nurbs to a Polygon Mesh	<i>Converting NURBS Surfaces to Polygon Meshes</i>	Fundamental

Topic	Sub-Topic	Recommendation	Reference	Level
Subdivision Surfaces	Geometry Approximation	Geometry Approximation Properties	<i>About Subdivision Surfaces</i>	Fundamental
	Create > Subdivision	Creating a Subdivision Surface		Fundamental
	Local Subdivision Refinement	Subdividing a part of an object		Fundamental
	using "+" and "-" hotkeys	Using Geometry Approximation Hotkeys + and -		Fundamental
Duplicating	Duplicate/Clone/Instance	Overview of Duplicate Tools and difference between Duplicate, Clone and Instance	<i>Duplicating and Cloning Objects</i>	Fundamental
	Duplicate Settings	Editing Duplicate Settings		Fundamental
Duplicate	Duplicate Single	Duplicating a single objects		Fundamental
	Duplicate Multiple	Duplicating Multiple times		Fundamental
	Duplicate Single without Options	Duplicating without settings		Fundamental
Clone	Clone Single	Clone a single objects		Fundamental
	Clone Multiple	Clone Multiple times		Fundamental
	Clone Single without Options	Clone without settings		Fundamental
Construction Modes	Construction Modes	Overview of Softimage Construction Modes		<i>Operator Stack</i>
Operator Stack	Softimage Operators	Editing the Operator stack (Freezing, Disable, Moving, Deleting)	Fundamental	
Modeling Relations	Modeling Relations in Softimage	Modeling Relations between objects like a curve and surface	<i>Modeling Relations</i>	Fundamental
GATOR	Attribute Transfer	Transferring Attributes with GATOR and other tools that create a new object	<i>Attribute Transfer</i>	Fundamental
Deformations	Simple Deformations	Bend, Twist, Push...	<i>Simple Deformations</i>	Fundamental
	Lattices	Creating and using a lattice using Primitive Lattice	<i>Lattices</i>	Fundamental
	Smooth and Relax	Smoothing and Relaxing Geometry	<i>Smoothing and Relaxing</i>	Fundamental
Primitives Models and Characters	Models and Characters	Overview of Models and Characters like Man, Man Maker and Face Maker	<i>Using Ready-Made Characters</i>	Fundamental

Topic	Sub-Topic	Recommendation	Reference	Level
Modeling Hotkeys	N = Add/Edit Polygon			Fundamental
	\ = Add Edge			Fundamental
	Insert = Add Vertex			Fundamental
	[ = Knife Tool			Fundamental
	] = Split Edge Tool			Fundamental
	M = Tweak Component Tool			Fundamental
	Shift+D = Subdivide Polygon/ Edges			Fundamental
	Ctrl+D = Duplicate Object/ Component			Fundamental
Context Sensitive RMB Menu	RMB Menu	Overview of context sensitive RMB (Right Mouse Button) menu	<i>Accessing Commands and Tools</i>	Fundamental
Selection Tools	F7 = Rectangle Selection			Fundamental
	F8 = Lasso			Fundamental
	F9 = Freeform			Fundamental
	F10 = Raycast			Fundamental
	Shift+F10 Rectangle-Raycast			Fundamental
	F11 Paint Selection			Fundamental
	T = Rectangle Point			Fundamental
	E = Rectangle Edge			Fundamental
	I = Raycast Edge			Fundamental
	Y = Rectangle Polygon			Fundamental
	U = Raycast Polygon			Fundamental
Transformation Tools	X = Scale Tool			Fundamental
	C= Rotate Tool			Fundamental
	V= Translate Tool			Fundamental
	M=Move/Tweak Points			Fundamental
Polygon Modeling	Symmetrize Polygons	Using Symmetrize to mirror objects or work on 1 half and see the effect on the other side	<i>Symmetrizing Polygons</i>	Intermediate
	Bevel Components	Creating Bevels	<i>Beveling Polygon Meshes and Components</i>	Intermediate

Topic	Sub-Topic	Recommendation	Reference	Level
Polygon Cleanup	Polygon Reduction	Overview of Polygon Reduction tool	<i>Polygon Reduction</i>	Intermediate
	Filter Polygons (Edges, Points)	Removing or reducing Polygons, Edges and Points using Filter	<i>Filtering Polygon Mesh Components</i>	Intermediate
Modeling From Curves	Extrusion Along Curve	Creating objects using Extrusion Tool	<i>Extruding Curves along Curve</i>	Intermediate
	Birail	Creating objects using Birail	<i>Using Birail</i>	Intermediate
	Four Sided	Creating objects using Four Sides	<i>Picking Boundaries Using Four-Sided</i>	Intermediate
Converting Geometry Type	Curves to Mesh	Converting a curve to a Polygon Mesh	<i>Converting Curves to Polygon Meshes</i>	Intermediate
Deformations	Weight Maps	Creating and using weight maps with Deformers	<i>Weight Maps</i>	Intermediate
	Shrinkwrap	Using Shrinkwrap deformer	<i>Shrinkwrap</i>	Intermediate

Rendering Overview	Rendering Process (Pipeline)	Introduce the general process of rendering images from 3D graphics data and give an overview of where hardware and software solutions are used in different markets of the media and entertainment industry (i.e. film, TV/broadcast, games, design visualization).	<a href="#">Rendering</a>	Fundamental
	Rendering Methods	Provide an overview of the major methods for rendering images including techniques such as scanline rendering, ray casting, ray tracing, radiosity, vector rendering, and stereoscopy.	<a href="#">Scanline Rendering</a>	Fundamental
			<a href="#">Ray Casting</a>	Fundamental
			<a href="#">Ray Tracing</a>	Fundamental
			<a href="#">Radiosity</a>	Fundamental
			<a href="#">Stereoscopy</a>	Fundamental
	Render Layers	Identify how Render Layers can be used to separate image components into separate elements or layers, such as a foreground layer, a characters layer, a sets layer, a background layer, and a sky layer.	<a href="#">Render Layers</a>	Intermediate
	Render Passes	Identify Render Passes as used to separate out different aspects of an image so that they may be deal with individually to assist in efficient changes of iterations of an image.	<a href="#">Render Passes</a>	Intermediate
	Rendering Effects	Provide an overview of a range of effects rendering techniques that add realism to an image or scene such as textured elements, caustics, global illumination, camera effects, motion blur, HDRI, atmospheric effects and non-photorealistic effects..	<a href="#">Motion Blur</a>	Intermediate
			<a href="#">Global Illumination</a>	Intermediate
<a href="#">Caustics</a>			Intermediate	

Topic	Sub-Topic	Recommendation	Reference	Level
Rendering Overview	Rendering Process (Pipeline)	Explain the general processes employed in creating a production pipeline for 3D rendering using either hardware or software solutions.		Fundamental
	Rendering Methods	Use stills from popular contemporary CG media to illustrate and compare the principle rendering methods and their visual differences in rendering 3D components and final images.		Fundamental
		Introduce and explain how the film industry is utilizing stereoscopic rendering techniques to create 3D movies.	<a href="#">Stereoscopic Movies</a>	Fundamental
	Render Layers	Demonstrate the process of rendering in components or parts to allow more control over changes and/or iterations to an image or sequence.	<a href="#">Passes / Layers</a>	Intermediate
	Render Passes	Illustrate the separate render passes that may be used to create a fully rendered and lit image or scene and explain the associated relevant terms such as beauty pass, highlight pass, shadow pass, reflection pass etc.	<a href="#">Passes / Layers</a>	Intermediate
	Rendering Effects	Use stills from popular contemporary CG media to illustrate the added realism or embellishment of rendered effects to the final composition of a shot or scene.		Intermediate

**WARNING:** This document contains several instances where URL's of the same or similar name may link to different website addresses

Topic	Sub-Topic	Recommendation	Reference	Level
Rendering Overview	Rendering Process (Pipeline)	Construct a simple diagram that illustrates an example of the 3D rendering processes required to create an image with highlights, reflections, shadows etc.		Fundamental
	Rendering Methods	Research, collect, and compare examples of rendering methods that illustrate the range of image attributes available for CG production.		Fundamental
	Render Layers	Research and collect (or create) a series of breakdown images, (separate render layers) and explain how they are combined to create a fully rendered image or scene.		Intermediate
	Render Passes	Research and collect a series of breakdown passes, (separate render layers) of the components of an image or scene that demonstrate how in combination they create a fully rendered and complete image.	<a href="#">Passes Example</a>	Intermediate
	Rendering Effects	Research, collect, and compare examples of textured elements, caustics, global illumination, camera effects, motion blur, HDRI, atmospheric effects and non-photorealistic effects that illustrate the range of effects attributes available for CG production		Intermediate

Anatomy	Basic Anatomy	Review the basic components of the human body, including bones, muscles, and major organs.	<a href="#">Human Anatomy</a>	Fundamental
	Bipedal Anatomy	Review the basic bone structure (name, location, size of primary bones) of the human skeleton.	<a href="#">Biped Skeleton</a>	Fundamental
		Review the primary muscles (name and location) in the human body.	<a href="#">Biped Muscles</a>	Fundamental
Kinematics	Forward Kinematics	Introduce how the concept of forward kinematics and how it relates to animation controls.	<a href="#">Forward Kinematics</a>	Fundamental
	Inverse Kinematics	Introduce how the concept of inverse kinematics and how it relates to animation controls.	<a href="#">Inverse Kinematics</a>	Fundamental
Anatomy	Quadruped Anatomy	Review the basic structure of a typical quadruped skeleton.	<a href="#">Quadruped Skeleton</a>	Fundamental
	Human Anatomical Variation	Illustrate and distinguish the major differences among male, female, old and young, quadruped and creature anatomy.		Fundamental
	Natural Biped Joint Rotation	Review the natural joint rotation limits (articulation) and root of motion (hips) of the biped anatomy.		Intermediate
	Natural Quadruped Joint Rotation	Review the natural rotation limits (the articulation) and root of motion (hips and shoulders) of a typical quadruped anatomy.		Intermediate
	Skin Deformation	Review how muscles deform skin and change the appearance of a character's body.		Intermediate

Topic	Sub-Topic	Recommendation	Reference	Level
Anatomy	Bipedal Anatomy	Using a structural diagram of human anatomy, illustrate skeletal construction with an emphasis on joint position, rotation, the resulting limitations of movement and the root of motion (hips).		Fundamental
	Quadruped Anatomy	Using a structural diagram of quadruped anatomy, illustrate the skeletal construction with an emphasis on joint position, rotation, the resulting limitations of movement and the roots of motion (hips and shoulders).		Fundamental
	Human Anatomical Variation	Using reference video, 2D and 3D sample sequences, illustrate the differences in human motion due to body size, shape, age, gender and emotional state.		Fundamental
Kinematics	Forward Kinematics	Demonstrate and explain (through visual examples) the application of FK in the setup of a simple rig, such as a Luxo lamp or mechanical toy crane.		Fundamental
	Inverse Kinematics	Demonstrate and explain (through visual examples) the use of inverse kinematics to control a simple action such as a foot being raised and placed on a box or staircase.		Fundamental
Animal Motion	Human Locomotion	Using reference video, illustrate and analyze the dynamics of the human walk cycle with reference to each body component undergoing different types of forward movement (e.g. walk, run, sneak).	<a href="#">Human Locomotion</a>	Intermediate
	Quadruped Locomotion	Using reference video, illustrate the specific characteristics of variations in basic quadruped motion such as walk, trot, or gallop.	<a href="#">Quadruped Locomotion</a>	Intermediate

**WARNING:** This document contains several instances where URL's of the same or similar name may link to different website addresses

Topic	Sub-Topic	Recommendation	Reference	Level
Kinematics	Forward Kinematics	Create an FK rig for a simple Luxo lamp, mechanical toy crane, or similar non-deforming model that is made of multiple moving parts.		Fundamental
	Inverse Kinematics	Use inverse kinematics to animate an arm and hand placing a ball on a solid surface.		Fundamental
Animal Motion	Human Locomotion	Using reference video, analyze and communicate the structural motion of the human walk cycle with reference to the transformation required by each body component.	<a href="#">Human Locomotion</a>	Fundamental
	Quadruped Locomotion	Using reference video, analyze and communicate the structural motion of a quadruped walk cycle with reference to the transformation required by each body component.	<a href="#">Quadruped Locomotion</a>	Fundamental
	Human Anatomical Variation	Compare the skeletal structure and discuss the resulting motion characteristics of a child, middle-aged, and elderly person.		Fundamental
	Bipedal Motion	Using a simple humanoid character rig, create a series of realistic poses to illustrate a simple action such as jumping over a box. This should be achieved without tearing the model geometry.		Intermediate
	Quadruped Motion	Using a simple quadruped character rig (e.g. cat or dog), create a series of realistic poses for a simple motion (e.g. a pounce). This should be achieved without tearing the model geometry.		Intermediate

Task / Process Analysis	Production Workflow	Explain and demonstrate the process of analyzing a typical animation and/or visual effects workflow by breaking down the activity into discrete and identifiable phases or stages.	<a href="#">Flowchart</a>	Fundamental
	Automation of Repetitive or Complex Tasks	Using a step-by-step analysis in the form of a flowchart, identify individual tasks or procedures that are either repetitive or complex and that would benefit (the user) from being automated through the use of a script.	<a href="#">Procedural Analysis</a>	Fundamental
Scripting Benefits	Scripting Applications	Identify (find existing sources) and describe a range of useful tasks, tools, user interfaces and procedures that have been created using scripting methods for a specific application software.		Fundamental
	Scripting for Personal Productivity	Identify the primary benefits of using scripts to enhance personal workflow, productivity and skills set.		Fundamental
	Scripting Impact on Team Collaboration	Identify the importance of collaboration among production animators, technical directors and script developers in identifying, developing and using scripting procedures to improve workflow, accelerate production, share expertise and enhance teamwork.	<a href="#">Computer Programming</a>	Fundamental

Topic	Sub-Topic	Recommendation	Reference	Level
Task / Process Analysis	Production Workflow	Demonstrate the creation of a production workflow analysis using a step-by-step breakdown of each individual activity and create a flowchart that shows the relationships among them.	<a href="#">Flowchart</a>	Fundamental
	Automation of Repetitive or Complex Tasks	Identify a typical repetitive task, procedure or potential custom interface that would benefit from being scripted - emphasizing the advantages in terms of accumulated time saved and improved production efficiency.	<a href="#">Analysis Techniques</a>	Fundamental
Scripting Benefits	Scripting Applications	Demonstrate the result of creating scripts for a range of applications and tools in the production process that will increase efficiency, save time and improve productivity.		Fundamental
	Scripting for Personal Productivity	Demonstrate how application of a sample script can improve an individual's productivity through automatic repetitive tasks and release more time for creative and innovative activities.		Fundamental
	Scripting Impact on Team Collaboration	Use practical production examples to demonstrate the critical importance of identifying key tools and tasks that can be automated through scripting and communicated among the production team to develop better workflow, speed up production, improve quality and enhance the collective skill set.	<a href="#">Computer Programming</a>	Fundamental

Task / Process Analysis	Production Workflow	Create a personal workflow of a typical production task or process in the form of a simple flowchart.	<a href="#">Flowchart</a>	Fundamental
	Automation of Repetitive or Complex Tasks	Select and break down a typical repetitive or complex production task and identify specific procedures that could be automated with a simple script.	<a href="#">Procedural Analysis</a>	Fundamental
Scripting Benefits	Scripting Applications	Research and collect from the Internet or other sources, several scripts that may be applied directly to the animator's workflow to automate repetitive animation production tasks.		Fundamental
	Scripting for Personal Productivity	Using a sample script to automate a key task, evaluate its implementation in terms of the impact on (your) individual workflow, production time, personal productivity and job satisfaction.		Fundamental
	Scripting Impact on Team Collaboration	Working in small teams (3 or 4 people), brainstorm and select an example of a key task that needs to be scripted to improve production. Write brief specification for how it should function in terms that can be shared among production staff, computer programmers and technical directors.	<a href="#">Computer Programming</a>	Fundamental

Topic	Sub-Topic	Recommendation	Reference	Level
UI Workflow	UI Task Analysis	Explain the importance of analyzing user workflow, focusing on a productive arrangement of the user interface (UI) to perform specific tasks. Compare software UI interaction to the human/UI interaction associated with other task-based products around us (mobile phones, automobile dashboards, television remotes, musical instruments, etc...).	<a href="#">Workflow</a>	Fundamental
	Reflective Practice (Identifying Roadblocks)	Review the benefits gained by evaluating UI interaction and explain why well-organized use of the UI can best support and sustain efficient workflow.	<a href="#">Reflective Practice</a>	Fundamental
	Reviewing UI Tools	Explore how the effective use of a well-organized and simplified UI reduces CPU overhead, streamlines workflow, ensures easily accessible tools, and processes and results in enhanced productivity.	<a href="#">User Interface</a>	Fundamental
	Improving UI Application	Explore and illustrate how comparing UI strategies and workflow among peers and mentors who do the same or similar tasks, and making changes based on their feedback and recommendations, has a positive effect of personal productivity, multi-user production workflow, creative teamwork, and job satisfaction.	<a href="#">Mentorship</a>	Fundamental
	Multiple Competing UI's (Digital Distractions)	Illustrate the positive and/or negative effects on specialized tasks and workplace productivity of adding additional UI's that involve "continuous partial attention" and explain the importance of reducing digital distractions.	<a href="#">Continuous Partial Attention</a>	Fundamental

Topic	Sub-Topic	Recommendation	Reference	Level
UI Workflow	UI Task Analysis	Demonstrate the process of analyzing a production task by capturing and recording a user's workflow and associated UI organization using peer or mentor evaluation.	<a href="#">Workflow</a>	Fundamental
	Reflective Practice (Identifying Roadblocks)	Select a suitable production task and demonstrate how a disorganized application of the UI can hinder workflow and how inefficient arrangements can dramatically reduce productivity.	<a href="#">Reflective Practice</a>	Fundamental
	Reviewing UI Tools	Demonstrate the application of a well-organized and efficient UI for two or three selected core tasks and show how application workflow is enhanced and system response is improved.	<a href="#">User Interface</a>	Fundamental
	Improving UI Application	Demonstrate the positive effects of peer and mentor feedback on the accessibility, organization, sequencing, simplicity, consistency, workflow and efficient use of UI tools and techniques.	<a href="#">Mentorship</a>	Fundamental
	Multiple Competing UI's (Digital Distractions)	Demonstrate the effect of multitasking on a single task compared to using a single, user-defined UI.	<a href="#">Continuous Partial Attention</a>	Fundamental

**WARNING:** This document contains several instances where URL's of the same or similar name may link to different website addresses

Topic	Sub-Topic	Recommendation	Reference	Level
UI Workflow	UI Task Analysis	Carry out a typical production task engaging the services of a peer or mentor to observe and record your use of the UI in an annotated timeline.	<a href="#">Workflow</a>	Fundamental
	Reflective Practice (Identifying Roadblocks)	Deconstruct and examine the results of your task analysis with feedback from your peer or mentor. Discuss and analyze your use of the UI, identifying organizational arrangements that obstruct productivity.	<a href="#">Reflective Practice</a>	Fundamental
	Reviewing UI Tools	As a result of your task analysis, reconstruct the user interface to accommodate the best use of UI tools include the simple arrangement of views and windows, menus and shelves, the use of keyboard shortcuts, scripting, readable text, color coding and other user-defined UI system attributes.	<a href="#">User Interface</a>	Fundamental
	Improving UI Application	Test and evaluate the revised UI, assess the resulting changes in productivity and progress, and document the result of peer and mentor feedback on personal productivity, continuous improvement, and corporate effectiveness.	<a href="#">Mentorship</a>	Fundamental
	Multiple Competing UI's (Digital Distractions)	Evaluate and compare personal productivity under two conditions; working solely on a single application with user defined UI, and working with multiple applications using one or more additional inputs in the form of internet access, social networking, e-mail, audio and/or video channels, IM, chat, conferencing and other applications and/or services.	<a href="#">Continuous Partial Attention</a>	Fundamental
