

Movimento 1.3 software is a versatile motion capture solution which extracts 3D data from traditional video files.

Product Advantages

Use any type of video camera

- Handles all image formats; from VGA to 4K film resolution
- Handles multiple resolutions, lenses and frame rates simultaneously
- Handles source images from stationary or moving cameras simultaneously

Capture in virtually any environment

- Capture inside or outside; no special lighting needed
- Capture using hand-held cameras; follow the action to extend the volume
- Capture in various locations; calibration features make for a portable solution

Track any type of feature

- Track faces, hands or full-body performances for character animation data
- Track actors, props or objects filmed on-set for interactive 3D/FX integration
- Track anything visible; make-up, markers, eyeballs, landscape points, etc.

Export Robust 3D Data

- Export solid 3D positional data compatible with Maya, Max, MoBu & more
- Export the real-world camera path, distortion grid and other parameters
- Export Triangulated Mesh of marker cloud and optional Global Motion node

Movimento 1.3 technology turns standard video cameras into a mobile motion capture studio.
