

Autodesk Mudbox 2012 Service Pack 1 Release Notes

This document describes known limitations, issues, and fixes included in Autodesk Mudbox 2012 **Service Pack 1**. It is strongly recommended that you read this document before you install this release.

What's Fixed?

The following list contains bug numbers and descriptions for issues fixed in this release.

Bug Number	Description
378120	Some SDK examples are not working.
378343	If "Solo as diffuse" is ON in the Preferences, Unsolo will not work.
378616	When using a tablet (in pen mode and in mouse mode), some items in the interface (buttons, windows, menus, dialog boxes) do not work properly.
381624	Exporting FBX files with multiple PTEX meshes that share the same material and PTEX meshes not currently at level 0 does not work correctly.
382252	Unmasking then undoing produces spikes (points shoot out of the mesh).
382261	Textures from imported MUD files may be lost after saving.
382315	Can't import UVs after Create UVs. A warning message pops up.
382380	Crash deleting a joint after its mesh has been deleted.
382503	Mac OS X only - Auto Tile Loader doesn't work after releasing Command key.
382542	Marking menus do not show up in Hot box with dual monitor setup.
382958	Grab tool with mirror doesn't work when the mirrored cursor is outside the viewport.
383484	Stencil editor canvas should be subdivided to level 3 by default.
383712	Extract Texture Maps on PTEX models allows the user to save non-PTEX files and produces error messages.
383754	Crash when attempting to extract PTEX file from mesh with no UVs.
383800	Eyedropper tool picks wrong color in some areas.
383999	Better performance for Freeze brush (Freeze, Invert Freeze, Unfreeze All and Freeze Selected). NOTE: Increase speed further by adjusting the Stamp Spacing and Buildup properties for the Freeze brush.
384582	Import UV does not support FBX on Mac OS X and Linux.
384630	Solo As Diffuse scrambles textures on models that have multiple tiles.
384902	Mudbox crashes after undoing delete, then undoing translate.
384928	If topology hasn't changed, Send to Mudbox > Update Current Scene should simply update the vertex positions, and the UVs of the meshes inside Mudbox.
384940	Merging paint layers always results in a PNG file no matter what format was used to create the paint layer.
384992	Export Screen to PSD is not exporting all layers, only the current layer.

Limitations and Notes

This section lists known limitations and workarounds for Mudbox 2012 **Service Pack 1**.

Please report any additional issues using the online bug reporting form at:

www.autodesk.com/mudbox-bugreport or from the Help > Report a Problem menu item in Mudbox.

Bug Number	Description
355804	Creating a joint may be difficult if the mesh has a lot of detail. Workaround: Create the joint at a lower subdivision level.
355918	Installation: Error that says the product key may be invalid and to re-enter it. Workaround: Click OK on this dialog, click Next button again, and if product key is valid the installation continues.
357041	Mudbox on Linux does not get pressure events from Wacom tablets with Fedora 12/Redhat 6, QT 4.5. You can find more details in the bug report here: https://bugzilla.redhat.com/show_bug.cgi?id=569132 There is a patch for Qt here: http://koji.fedoraproject.org/koji/buildinfo?buildID=160252
358312	Files that include 16 bit TIF maps will show errors with "Send to Maya..." operation.
360224	Mudbox crashes if the extraction map output file name contains %S in string (for example: AO_(%S).bmp) and Preview as Paint Layer is on.
362133	Creating a joint with Topology Weights doesn't work properly with non-4-sided meshes. Workaround: Use alternative Weights method.
362857	If the level of the source model is not the current level when extracting a map, the detail of lower sculpt layers will be missing. Workaround: Ensure you display the required subdivision level before extracting the map, or select the current level in the Extract Texture Maps window to get the correct result.
363366	Transfer paint layer works incorrectly if target and source have overlapping UVs.
366007	The Transfer Details function works best on objects that are the same size, or larger, than the default Mudbox meshes. If the transfer produces artifacts on the target mesh, try scaling up the source and target meshes to the same size as the default head mesh.
374126	When using a non US-English standard keyboard, some of the hotkeys may not work. Workaround: Set your IME to "English - United States" while using Mudbox. For more information see your operating system documentation.
376624	Installation (Windows): Mudbox does not start from Japanese/multi-byte path. If you install Mudbox to a custom location containing Japanese/multi-byte characters and then attempt to open Mudbox, Windows returns an error. Workaround: Do not install Mudbox to a custom location containing Japanese/multi-byte characters.
377770	Send to 3ds Max: Changing units between Max and Mudbox causes unpredictable results.
381451	Due to recent changes made to the common shader, scenes that contain models using the older default material from 2010 are no longer supported in 2012. Possible side effects: shadows may not display correctly and posing will not work. Workaround: Assign the 2012 materials.
381496	When painting or sculpting with symmetry on, sometimes the result will not appear on the opposite side. Verify that you have "Falloff based on Facing Angle" off.

- To run Mudbox 2012 you must have a processor which is SSE3 compliant. Mudbox uses SSE3-specific code, which does not allow Mudbox to run on hardware which is SSE2 or previous.
- Sculpting with the Stamp Spacing property turned on may cause the brush stamp to be offset to the cursor location when using a Wacom Cintiq or a Wacom tablet when the pen setting is set to Mouse mode. To correct this, add the environment variable "MUDBOX_USE_LOWRES_TABLET_DATA".
- With ATi graphics cards, if you are seeing texture painting corruption such as painting black and artifacts, adding the environment variable "MUDBOX_PAINT_CONTEXT_FLUSH" may fix the problem.
- Some users may be seeing incorrect GPU RAM reporting causing many warnings to pop up every time they create, merge, or change the visibility of layers. The environment variable "MUDBOX_FORCE_GPU_RAM" (on Windows only) lets you override the amount of GPU memory in megabytes that Mudbox sees. If you have an Nvidia Quadro 5600 and it reports 1 MB of GPU RAM (the hardware has 1.5GB), set the variable to 1536 (which is 1.5 * 1024) for that card. Values which are not numbers will be ignored, and values will be clamped to the range 256 to 4096.
Note: For more information on these environment variables, see the Environment Variables topic in the Mudbox Help.
- If you experience any difficulty launching the Mudbox Help using Internet Explorer, use an alternative browser such as Firefox, or download and install the Help locally from <http://www.autodesk.com/mudbox-helpdownload-enu>
- If you previously installed any beta version (including Release Candidate versions) of Autodesk Mudbox 2012, you must uninstall and delete all system folders pertaining to the pre-release versions before you can install the commercial version.

SDK Examples:

On Mac OS X, release configurations may not build correctly. You must set the Active Architecture to x86_64 in Xcode.

To do this:

1. Open example project using Xcode.
2. In menu bar, select Project > Edit Project Settings.
3. Select the Build tab.
4. Under Architectures in the Setting window, make sure the Architectures value is set to 64-bit Intel.
5. Close window and build using the Release configuration.

PtexImporter example requires PtexExtractor example to be built and copied into PtexImporter's build directory for linking.

To build Turntable example, install Qt and run moc on the example header files. See readme in example.

Additional Resources

For complete **installation and licensing instructions** refer to the *Installation Overview and FAQ* and the *Licensing Guide*. Access these guides from the Installation Help link of the Mudbox installer or find them here:

<http://www.autodesk.com/mudbox-faq-2012-enu>

Customer Involvement Program (CIP)

The first time you start Mudbox, the Customer Involvement Program dialog box appears. If you choose to participate in the Customer Involvement Program, Mudbox will automatically send Autodesk information about system configuration, what features you use most, any problems that you encounter, and other information helpful to the future direction of the product. For further information, see <http://www.autodesk.com/cip>.

Customer Error Reports (CERs)

We are able to improve the stability of Mudbox largely because of the Customer Error Reports (CERs) that users of our products submit. We thank you for taking the time to fill out these reports and ask that you include as much information as possible about what actions you were performing at the time the error occurred. These details raise the value of the report immensely and are very much appreciated by the Autodesk Mudbox Engineering team.

For further information about CERs refer to <http://www.autodesk.com/cer>.
