Corporate Mission

Avineon is a global technology company specializing in information technology, geospatial, and engineering services for government and private industry.

We deliver total system solutions that provide outstanding value by applying our innovative approaches, skilled personnel, and disciplined processes.

Who We Are

Avineon, Inc. is a specialized provider of information technology, engineering support, and geospatial services. We serve federal/central, state/regional, and local government agencies, as well as commercial clients including utility, telecommunications, process, and energy companies.

Since 1992, we have offered total system solutions using state-of-the-art business and quality processes, all provided at a competitive cost.

Avineon is a global company, with over 800 employees worldwide across North America, Europe, and Asia, many of whom carry security clearance at the highest levels. Our corporate headquarters are located in Alexandria, Virginia, USA with other North America offices in Florida and Canada. Avineon's global presence also extends to Europe (the United Kingdom, Belgium, France, and Holland) and India.

Avineon is an ISO 9001:2008 and CMMI Maturity Level 3 registered company, demonstrating that we have a defined and repeatable quality system for both data processing and software development. Our software development life cycle conforms to the best industry standards. We follow systematic and disciplined approaches, which result in quality outcomes and lasting benefits for our customers, for both data processing and software development.

Highlights

Avineon joined Autodesk's Consulting System Integrator program to better assist customers with a variety of GIS and engineering applications. Autodesk is a leader in 3D design, engineering, and entertainment software. Customers across the manufacturing, architecture, building, construction, and media and entertainment industries—including the last 16 Academy Award winners for Best Visual Effects—use Autodesk software to design, visualize, and simulate their ideas.
