

Autodesk®

Subcontractor 2009

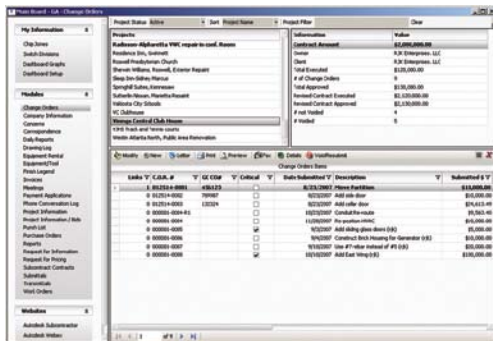

More productivity.
Less paper.

Document Every Detail

More than ever, subcontractors are experiencing more complex projects, fiercer competition, more demanding clients, and shrinking margins. As business heats up and pressure mounts, subcontractors need to be more precise and meticulous with project documentation. It is not just efficiency, it is self-preservation.

Autodesk® Subcontractor project documentation software helps specialty contractors increase productivity and professionalism, and improve process and accountability across the organization. Make no mistake: no matter what project you are working on, you need to keep track of every detail. Every question, incident, and action related to a project must be uppermost in your mind and right at your fingertips. Other project documentation software can leave you with piles of papers and multiple shelves of bulky three-ring binders. To help manage project risks, work efficiently, and prevent loss of profit, a centralized database solution for documenting projects is crucial.

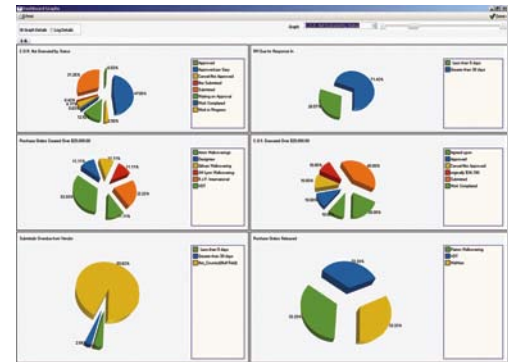

Create, log, track, and report from a single screen.

Autodesk Subcontractor was created by and for specialty contractors to help increase productivity by automating document management. Autodesk Subcontractor gives contractors the tools necessary to convey a professional image to clients while helping improve document management processes. Create, store, and track a wide range of digital documents in a centralized database and increase efficiency, lower project risks, and enhance your corporate image. With Subcontractor, you can increase productivity and significantly reduce paperwork.

Increase Efficiency

Increasingly, project managers are overseeing multiple projects simultaneously, representing millions of dollars and plenty of pressure. Manual documentation wastes valuable time, and maintaining and assessing multiproject status can become a huge headache and a productivity drain.

Autodesk Subcontractor helps your team accomplish more with fewer resources. Employees maintain a consistent view of their projects, enabling them to interactively monitor crucial information without having to search through multiple files or three-ring binders. And when you reassign project managers, the consistent, comprehensive database makes it easier for them to get up to speed.

Summarize information in the Executive Dashboard.

Archive your documentation by storing your project history in a centralized database and tracking outstanding and critical items. Streamline document creation with customizable templates and maintenance tables. Automatically number and log project documents. And integration with Microsoft® Outlook® means you can email, schedule, and assign tasks like you always do, all within Autodesk Subcontractor.

Perform and Protect

Provide better project management through better documentation, increased accountability, and faster dispute resolution.

Improve Processes, Reduce Exposure to Risk

The construction industry typically runs on piles of paperwork. Autodesk Subcontractor helps improve company processes, enabling contractors to create, track, manage, and share project documentation more effectively. Areas of exposure and specific problems can be identified and resolved earlier.

The general contractors you work with have already adopted sophisticated document management systems that put information at their fingertips. When you rely on paper and file cabinets, it can be difficult to ensure that your company will be paid fairly should a dispute or claim arise. Better documentation can help resolve disputes more quickly and reduce time spent tracking down important documents.

By helping you monitor potential problems and precisely document projects, Autodesk Subcontractor enables tracking of crucial project items through an intuitive Executive Dashboard, summary reports of key performance indicators, and the ability to seamlessly view high-level overviews and precise details.

Compete, Communicate, Come Together

By helping you to more easily organize, track, and report progress on all your projects, Autodesk Subcontractor makes it possible to spend more time initiating and solidifying client relationships. Professional, organized, and easily understandable project documentation both increases efficiency and enhances confidence.

According to clients, Autodesk Subcontractor provides very fast return on investment, while helping to reduce risks and increase productivity.

Enjoy real-time item tracking by creating, processing, and viewing all past reporting from any module.

Our attorney was very impressed with the quality and completeness of our documentation. Signed change orders, agreements, RFIs, notices, daily reports—you name it, we had it all documented, so we didn't have to scramble. That all gave our attorney the confidence to move forward with the claim.

—Stephen Rohrbach, CPC
President
F. A. Rohrbach, Inc.

Autodesk Subcontractor has streamlined our processes internally and created discipline for our project managers. The project tracking functions have saved us significant time, allowing us to focus on the needs of our clients. And because many of our clients contract with us for multiple projects, they appreciate that every piece of information they receive from us has the same look and feel. Autodesk Subcontractor helps position us a notch above the pack.
