

# System Requirements

AutoCAD® Map 3D provides access to data previously locked up in the GIS department and provides the best tools available to edit native geospatial data.

AutoCAD Map 3D software is a leading engineering platform for creating and managing spatial data. Using open-source Feature Data Object (FDO) technology, AutoCAD Map 3D provides direct access to the leading data formats used in design and GIS and enables the use of AutoCAD® software tools for maintaining a broad variety of spatial information. Bridging the gap between CAD and GIS, AutoCAD Map 3D makes it possible for engineering and GIS professionals to work with the same data and enables design processes to integrate geospatial functions in a single environment for more efficient workflows. The results are better designs, increased productivity, and better data quality.
