Newsflash: Premier UK Engineering and Environmental Consultancy Adopts Autodesk® Buzzsaw®

Waterman Group is the latest major UK engineering consultancy to choose Autodesk® Buzzsaw® as its online project collaboration service. Waterman CAD manager, Lee Barnard explains that the service is making it easier, more efficient and quicker for teams to work across continents from the group's offices and associates in Europe, China, Africa, Russia and Australia.

Buzzsaw is also helping faster integration of teams from newly-acquired companies following a period of expansion. It enables them to share and manage drawings and other documents immediately before they have access to the company's main network.

"Waterman International has found Buzzsaw excellent for making current documents immediately available to all who need access," says Barnard. "By centralising project data, our engineers in the UK can work closely with those in our office in Warsaw, for example, without any time delay or worry about sending large drawings via email."

Also, Buzzsaw maintains detailed activity logs at site, project, file and user levels so that users can keep an audit trail of all document changes and user actions. The service also includes viewing and markup tools for design files, including DWG and DWF so clients can also review designs without needing AutoCAD® software.

Barnard continues: "We do use other project collaboration services when these are specified by certain clients, but we've sometimes found these time-consuming to use. Also they are not easy for everyone to access. Buzzsaw is far more democratic and very simple both to implement and to use.

"I foresee other divisions across the group will be taking Waterman International's lead and making Buzzsaw part of their day-to-day work."
